Electromagnetics and Antenna Optimization Using Taguchi's Method Wei-Chung Weng, Fan Yang, Atef Z. Elsherbeni, 2007 This book presents a new global optimization technique using Taguchi's method and its applications in electromagnetics and antenna engineering Compared with traditional optimization techniques Taguchi's optimization method is easy to implement and very efficient in reaching optimum solutions Taguchi's optimization method is developed based on the orthogonal array OA concept which offers a systematic and efficient way to select design parameters The book illustrates the basic implementation procedure of Taguchi's optimization method and discusses various advanced techniques for performance improvement In addition the integration of Taguchi's optimization method with commercial electromagnetics software is introduced in the book The proposed optimization method is used in various linear antenna arrays microstrip filters and ultra wideband antenna designs Successful examples include linear antenna array with a null controlled pattern linear antenna array with a sector beam linear antenna array with reduced side lobe levels microstrip band stop filter microstrip band pass filter coplanar waveguide band stop filter coplanar ultra wide band antenna and ultra wide band antenna with band notch feature Satisfactory results obtained from the design process demonstrate the validity and efficiency of the proposed Taguchi's optimization method

Multiresolution Frequency Domain Technique for Electromagnetics Mesut Gokten, Atef Z. Elsherbeni, Ercument Arvas, 2012 Presents a general frequency domain numerical method similar to the finite difference frequency domain FDFD technique The objective of developing this new technique is to achieve a frequency domain scheme which exhibits improved computational efficiency figures compared to the traditional FDFD method

Scattering Analysis of Periodic Structures using Finite-Difference Time-Domain Method Khaled ElMahgoub, Fan Yang, Atef Elsherbeni, 2022-06-01 Periodic structures are of great importance in electromagnetics due to their wide range of applications such as frequency selective surfaces FSS electromagnetic band gap EBG structures periodic absorbers meta materials and many others The aim of this book is to develop efficient computational algorithms to analyze the scattering properties of various electromagnetic periodic structures using the finite difference time domain periodic boundary condition FDTD PBC method A new FDTD PBC based algorithm is introduced to analyze general skewed grid periodic structures while another algorithm is developed to analyze dispersive periodic structures Moreover the proposed algorithms are successfully integrated with the generalized scattering matrix GSM technique identified as the hybrid FDTD GSM algorithm to efficiently analyze multilayer periodic structures All the developed algorithms are easy to implement and are efficient in both computational time and memory usage These algorithms are validated through several numerical test cases The computational methods presented in this book will help scientists and engineers to investigate and design novel
