The Sustainability Curriculum Cedric Cullingford, John Blewitt, 2013 The links between education and sustainable development are deepening although subject to much controversy and debate The

success of the sustainability discourse depends both on the pedagogic and research functions of higher education. Similarly for higher education itself to remain relevant and engaged it faces pressure not only to integrate the insights and lessons drawn from the perspective of sustainable development but also to be responsive to scrutiny of its own practices in relation to sustainability. Among professionals in higher education sustainable development has its supporters and detractors. It is embraced by some individuals and departments while being perceived by others as a threat to the coherence of particular disciplines. Although it is not currently an academic discipline in its own right increasing public and professional familiarity with the term and the increasing urgency of global calls for the implementation of sustainable development mean that this is rapidly changing. This volume analyses the impact of the concepts and practices of sustainability and sustainable development on various academic disciplines, institutional practices, fields of study and methods of enquiry. The contributors drawn from a wide range of disciplines, perspectives, educational levels and institutional contexts examine the purpose of the modern university and the nature of sustainable education which includes exploring links to social movements for sustainability projects, curriculum change, culture and biodiversity values relating to gender equality and global responsibility and case studies on the transformation or otherwise of some specific disciplines.

Challenging the Digital Divide? Brian Loader, Leigh Keeble, 2004. There is growing concern that people without access to computers and the Internet may be excluded from a range of individual and communal opportunities including employment prospects, educational achievement, health status, leisure experiences, political participation and business opportunities. This report reviews existing literature about the emergence of a digital divide between those who have access to computers and those who do not and provides policy makers and practitioners with the first accessible and comprehensive examination of worldwide research conducted to date. The authors argue that computer networks in the perceived emerging information society makes access to these new information and communications technologies (ICTs) a prerequisite for commercial competitive advantage, social development and life chances. With examples of innovative applications of ICTs in disadvantaged communities, the report highlights their potential for improving the life opportunities and support for people living in such communities. It identifies the potential strengths and weaknesses of a range of community informatics initiatives as a means of providing effective support for people living in predominantly disadvantaged areas. The report also outlines key policy challenges for UK Online centres as an effective means to challenge the digital divide and provides clear policy recommendations to be addressed.
