African Institute of Mining and Metallurgy South African Institute of Mining and Metallurgy,1906 **Race and Democracy in the Americas** Georgia Anne Persons, Race and Democracy in the Americas examines dimensions of the comparative dynamics of race and ethnicity with a directed focus on the Americas most particularly Brazil and the United States Brazil and the United States are two countries in the Americas that have been major hosts for the African diaspora Both countries experienced prolonged enslavement of Africans and both now claim to be beacons of democracy for much of the developing world Both Afro Brazilians and African Americans have fielded major liberation movements against racism and oppression yet both groups continue to experience considerable residual racial discrimination and displacement Brazil and the U S remain racialized societies though both officially purport to be otherwise The chapters of this volume illuminate a common search for understanding how race operates in societies generally and how shapes life opportunities for African Americans and Afro Brazilians both oppressed by this most detrimental social construction The project that fueled this volume represented a rare opportunity for collaboration between Afro Brazilian scholars and their African American counterparts This volume offers a passionate conversation between colleagues who have endured common sociopolitical and cultural struggles but who have only belatedly been able to meet and connect as individuals Both groups share identities as scholars and activists for neither identity alone is sufficient to nourish the longings of their hearts nor of their consciences This volume also represents an all too rare opportunity to give voice and expression to the work of Afro Brazilian scholars Volume 9 of the National Political Science Review also carries a special tribute to Mack Henry Jones a senior black political scientist retiring from Atlanta University and honors Jones s legacy and continues his quest for understanding the nature and intricacies of oppression and possible paths to liberation This essential work will be of particular interest to ethnic studies specialists African American studies scholars political scientists historians and sociologists Georgia A Persons is professor of political science in the School of Public Policy at Georgia Institute of Technology where she also directs the Center for the Study of Social Change *Central Africa* ,1894 **Africa** Sir John Scott Keltie,1906 Continents and Supercontinents John J. W. Rogers,M. Santosh,2004-09-16 To this day there is a great amount of controversy about where when and how the so called supercontinents Pangea Gondwana Rodinia and Columbia were made and broken Continents and Supercontinents frames that controversy by giving all the necessary background on how continental crust is formed modified and destroyed and what forces move plates It also discusses how these processes affect the composition of seawater climate and the evolution of life Rogers and Santosh begin with a survey of plate tectonics and go on to describe the composition production and destruction of continental and oceanic crust and show that cratons or assemblies of cratons became the first true continents approximately one billion years after the earliest continental crust evolved The middle part of the book concentrates on supercontinents beginning with a discussion of types of orogenic belts distinguishing those that formed by closure of an ocean basin within the belt and those that formed by intracontinental deformation caused by stresses generated

elsewhere This information permits discrimination between models of supercontinent formation by accretion of numerous small terranes and by reorganization of large old continental blocks This background leads to a description of the assembly and fragmentation of supercontinents throughout earth history The record is most difficult to interpret for the oldest supercontinent Columbia and also controversial for Rodinia the next youngest supercontinent The configurations and pattern of breakup of Gondwana and Pangea are well known but some aspects of their assembly are unclear The book also briefly describes the histories of continents after the breakup of Pangea and discusses how changes in the composition of seawater climate and life may have been affected by the sizes and locations of continents and supercontinents
