Crossing the Border J. Martin Corbett, Lauge Baungaard Rasmussen, Felix Rauner, 2012-12-06 Crossing the Border examines the emergence of a new philosophy based on the idea of human centred technology and through the use of a case study illustrates the ways in which users social scientists managers and engineers can participate in the design and development of human centred computer integrated manufacturing CIM system The book offers a unique insight into a large European project ESPRIT project 1217 aimed at the design and development of a human centred CIM system The book

examines the problems inherent in developing interdisciplinary design methods and of crossing the border between the social and engineering sciences The authors offer proposals and guidelines for overcoming such problems based on their experience within this project Crossing the Border will be of particular interest to researchers and practitioners in the area of factory automation to students and researchers in AI and to all those interested in the human and organisational issues surrounding the computerised factory of the future *Technical Report*, 1992

Flexible Manufacturing Systems in Practice Joseph Talavage, 1987-12-18 This authoritative guide provides a logical progressive overview of the industrial realities of flexible manufacturing and will prove invaluable for manufacturing industrial production design mechanical systems and operations engineers *Manufacturing Systems Design and Analysis* Bin Wu, 1992 A technological book is written and published for one of two reasons it either renders some other book in the same field obsolete or breaks new ground in the sense that a gap is filled The present book aims to do the latter On my return from industry to an academic career I started writing this book because I had seen that a gap existed Although a great deal of information appeared in the published literature about various technical aspects of advanced manufacturing technology AMT surprisingly little had been written about the systems context within which the sophisticated hardware and software of AMT are utilized to increase efficiency Therefore I have attempted in this book to show how structured approaches in the design and evaluation of modern manufacturing plant may be adopted with the objective of improving the performance of the factory as a whole I hope this book will be a contribution to the newly recognized multidisciplinary engineering function known as manufacturing systems engineering The text has been designed specifically to demonstrate the systems aspects of modern manufacturing operations including systems concepts of manufacturing operation manufacturing systems modelling and evaluation and the structured design of manufacturing systems One of the major difficulties associated with writing a text of this nature stems from the diversity of the topics involved I have attempted to solve this problem by adopting an overall framework into which the relevant topics are fitted

Justification Methods for Computer Integrated Manufacturing Systems H. R. Parsaei, Thomas Ward, Waldemar Karwowski, 1990 Advanced automated manufacturing technology systems are perceived by many manufacturers to be the latest alternative to meet today's global market needs Higher productivity better quality and flexibility are just a few examples of the numerous benefits which can be achieved by implementing modern computer controlled manufacturing systems Many firms perceive Computer Integrated Manufacturing CIM as one of the most promising paths to achieve manufacturing excellence A CIM project can not be successfully implemented unless it is supported by long term strategic planning and economic analysis of the required capital investment decisions This book treats planning as the first step in the justification process Papers explore both strategic planning for computer integrated manufacturing CIM and more detailed issues such as part tool grouping and machine loading The critical issue of planning

for communications between various levels of computation and devices on the floor is reviewed Capacity planning and planning for assembly and quality control are also covered The important role of champions in justification is explored
