adequate number of algorithms to solve some problems that quite often arise in many applications in science and engineering. The book is largely self contained presuming no special knowledge of parallel computers or particular mathematics. In addition the solutions to all exercises are included at the end of each chapter. The book is intended as a text in the field of the design and analysis of parallel algorithms. It includes adequate material for a course in parallel algorithms at both undergraduate and graduate levels. *The modeling and analysis of parallel algorithm design* Gerald W. Cichanowski, 1985

Gopalakrishnan, Laveen N. Kanal, 2012-12-06 Recent research results in the area of parallel algorithms for problem solving search natural language parsing and computer vision are brought together in this book. The research reported demonstrates that substantial parallelism can be exploited in various machine intelligence and vision problems. The chapter authors are prominent researchers actively involved in the study of parallel algorithms for machine intelligence and vision. Extensive experimental studies are presented that will help the reader in assessing the usefulness of an approach to a specific problem. Intended for students and researchers actively involved in parallel algorithms design and in machine intelligence and vision this book will serve as a valuable reference work as well as an introduction to several research directions in these areas.

Parallel Algorithms Sandeep Nautam Bhatt, 1997-01-01 This volume is the result of the Third DIMACS Implementation Challenge that was conducted as part of the 1993-94 Special year on Parallel Algorithms. The Implementation Challenge was formulated in order to provide a forum for a concerted effort to study effective algorithms for combinatorial problems and to investigate opportunities for massive speed ups on parallel computers. The challenge included two problem areas for research study: tree searching algorithms used in game search and combinatorial optimization for example and algorithms for sparse graphs. Participants at sites in the US and Europe undertook projects from November 1993 through October 1994. The workshop was held at DIMACS in November 1994. Participants were encouraged to share test results to rework their implementations considering feedback at the workshop and to submit a final report for the proceedings. Nine papers were selected for this volume. **An Introduction to Parallel Algorithms** Joseph JáJá, Joseph Jaja, 1992. Written by an authority in the field this book provides an introduction to the design and analysis of parallel algorithms. The emphasis is on the application of the PRAM parallel random access machine model of parallel computation with all its variants to algorithm analysis. Special attention is given to the selection of relevant data structures and to algorithm design principles that have proved to be useful. Features: Uses PRAM parallel random access machine as the model for parallel computation. Covers all essential classes of parallel algorithms. Rich exercise sets. Written by a highly respected author within the field.
