

How to hold a camera

It's worth taking a few minutes to practise holding your camera before you start shooting – you'll get sharper shots

FINGER

The camera body is designed to be gripped with your right hand and your index finger over the shutter release. You should be able to support the button with a finger to maintain your grip.

HAND

Place your palm in your left hand. This should allow you to hold the front of the camera against your face with the hand, adding your right hand to grip the components.

ELBOWS

Turn your elbows into your body to brace your camera steady. The further out your elbows are, the more unstable you will be.

EYEBROW CONTACT

Let the camera rest your eye and rest the viewfinder against your forehead. This helps another point of contact on the body for more stability.

PORTRAIT

If you struggle with your camera in portrait orientation, then turn it on the smaller sensor side of the lens. It can be a little awkward, but your arms will be more comfortable.

LEGS

Place your feet with your feet in your stance. Feet are shoulder-width apart. This means you can feel the ground under your feet, which helps you maintain your balance.

TAKE A MAT

When kneeling to take some pictures, you might get wet or dirty. Take a mat or a piece of fabric to put under your knees for comfort and to protect your clothes.

BACK PANEL CONTROL

With your hands in the correct position, your thumb is well placed to access the controls on the back of the camera. Use the settings menu for the shooting settings.

BRING ONE LEG UP

If you're kneeling with a camera on your back, bring one leg up to support your body. Place your elbow on your knee to connect your leg and arm together, creating a second point of contact with the ground.

BEST ELBOWS

If you have a camera around your neck, keep your elbows close to your body. This will help you to keep the camera steady and avoid any blur.

CONTROL YOUR BREATHING

Remember when you take a shot? If you hold your breath or breathe in, you'll find your camera will shake. It's important to breathe normally and to control your breathing when you shoot.

LEAN IN

Leaning against a wall or other object is a good way to keep your camera steady. This will help you to keep your camera steady and avoid any blur.
