Differential And Difference Equations Through Computer Experiments:

Differential and Difference Equations through Computer Experiments Hüseyin Kocak, 2012-12-06 This is a somewhat unusual book with a dual purpose First it is a manual to help readers learn how to use PRASER the program on the accompanying diskette for mM personal computers Second it is an illustrated guide to the wonderful world of experimental and theoretical dynamics one which presents dozens of concrete examples ranging from the most rudimentary appropriate for the beginning student to the highly complex suitable for the research mathematician Before indicating what PRASER does and how it works let me describe how it came about During the past decade the field of differential and difference equations has witnessed a remarkable explosion of knowledge not only in theory but also in applications to disciplines as diverse as biology and fluid mechanics Computers have played a crucial role in this process by making possible detailed analyses of specific systems In this regard one need only mention the work of Lorenz on strange attractors and the discoveries of Feigenbaum on the bifurcations of interval maps

Differential and Difference Equations Through Computer Experiments Hüseyin Koçak, 1989 Phaser is a sophisticated program for IBM personal computers developed at Brown University by the author and some of his students which enables users to experiment with differential and difference equations and dynamical systems in an interactive environment using graphics This book begins with a brief discussion of the geometric interpretation of differential equations and numerical methods and proceeds to guide the student through the use of the program To run Phaser you need an IBM PC XT AT or PS 2 with an IBM Color Graphics Board CGB Enhanced Graphics Adapter VGA A math coprocessor is supported however one is not required for Phaser to run on the above hardware
