## 1. Matrix as a Linear Transformation

Let  $A$  be an  $n \times m$  matrix of real numbers. Instead of defining a matrix as a rectangular array of real numbers, we view it as a *linear function* from  $\mathbb{R}^m$  to  $\mathbb{R}^n$ .

First,  $A$  is interpreted as a *function* so that we write

$$y = Ax,$$

where  $y \in \mathbb{R}^n$  is the output, corresponding to the input  $x \in \mathbb{R}^m$ , of the function defined by  $A$ . Throughout,  $Ax$  is defined as the usual multiplication of a vector  $x$  to the matrix  $A$ . Note that we write as  $Ax$  the function  $A$  with its argument  $x$ , instead of  $A(x)$ , which is more standard in the general context. If  $A$  is a square matrix, in which case we have  $n = m$ , the function represented by  $A$  becomes a *transformation* on  $\mathbb{R}^n$ , i.e., a function from  $\mathbb{R}^n$  into itself.

Second,  $A$  represents a *linear* function. This follows directly from the usual rule for the matrix and vector multiplication, i.e., we have

$$A(c_1x_1 + c_2x_2) = c_1Ax_1 + c_2Ax_2$$

for any scalars  $c_1$  and  $c_2$  and vectors  $x_1$  and  $x_2$  in  $\mathbb{R}^m$ , which implies that  $A$  is linear as a function.

As for the usual linear function, we may define the *range*  $\mathcal{R}(A)$  and *null space* (or *kernel*)  $\mathcal{N}(A)$  of a function defined by a matrix  $A$  by

$$\begin{aligned}\mathcal{R}(A) &= \{y \mid y = Ax \text{ for some } x\} \\ \mathcal{N}(A) &= \{x \mid Ax = 0\}.\end{aligned}$$

We may easily show that  $\mathcal{R}(A)$  and  $\mathcal{N}(A)$  are *subspaces* respectively of  $\mathbb{R}^n$  and  $\mathbb{R}^m$ , i.e., subsets of vector spaces  $\mathbb{R}^n$  and  $\mathbb{R}^m$  that are vector spaces themselves. If  $y_1, y_2 \in \mathcal{R}(A)$ , then there exist  $x_1, x_2$  such that  $y_1 = Ax_1, y_2 = Ax_2$ , and therefore, we have

*Linear Functions and Matrix Theory* Bill Jacob,1995-03-30 Courses that study vectors and elementary matrix theory and introduce linear transformations have proliferated greatly in recent years Most of these courses are taught at the undergraduate level as part of or adjacent to the second year calculus sequence Although many students will ultimately find the material in these courses more valuable than calculus they often experience a class that consists mostly of learning to implement a series of computational algorithms The objective of this text is to bring a different vision to this course including many of the key elements called for in current mathematics teaching reform efforts Three of the main components of this current effort are the following 1 Mathematical ideas should be introduced in meaningful contexts with after a clear understanding formal definitions and procedures developed of practical situations has been achieved 2 Every topic should be treated from different perspectives including the numerical geometric and symbolic viewpoints 3 The important ideas need to be revisited repeatedly throughout the term with students understanding deepening each time This text was written with these three objectives in mind The first two chapters deal with situations requiring linear functions at times locally linear functions or linear ideas in geometry for their understanding These situations provide the context in which the formal mathematics is developed and they are returned to with increasing sophistication throughout the text

Matrix Theory: A Second Course James M. Ortega,2013-11-11 Linear algebra and matrix theory are essentially synonymous terms for an area of mathematics that has become one of the most useful and pervasive tools in a wide range of disciplines It is also a subject of great mathematical beauty In consequence of both of these facts linear algebra has increasingly been brought

into lower levels of the curriculum either in conjunction with the calculus or separate from it but at the same level A large and still growing number of textbooks has been written to satisfy this need aimed at students at the junior sophomore or even freshman levels Thus most students now obtaining a bachelor s degree in the sciences or engineering have had some exposure to linear algebra But rarely even when solid courses are taken at the junior or senior levels do these students have an adequate working knowledge of the subject to be useful in graduate work or in research and development activities in government and industry In particular most elementary courses stop at the point of canonical forms so that while the student may have seen the Jordan and other canonical forms there is usually little appreciation of their usefulness And there is almost never time in the elementary courses to deal with more specialized topics like nonnegative matrices inertia theorems and so on In consequence many graduate courses in mathematics applied mathematics or applications develop certain parts of matrix theory as needed

KWIC Index for Numerical Algebra Alston Scott Householder,1972 Matrix Theory David W.
