

Algorithm Bias: **Human** Biases in Disguise

Algorithm is a finite sequence of well-defined, computer-implementable instructions, typically to solve a class of problems or to perform a computation.

Everything seems to have artificial intelligence and machine learning built in according to those that market a product and those that have secretly been trading and collecting our data.

Experts and laypeople use terms and phrases with the same degree of confidence or 'knowledge'.

Some calculations are deemed 'protected' or 'secret' and are therefore not exportable.

Despite all the clever marketing, false assumptions and lack of knowledge, the concealed algorithms and the mathematics/analysis are predominately human biases not easily discernible.

Who accurate or transparent are the algorithms you come in contact with?

The Algorithmic Image Robert Rivlin, 1986 *Chromatic Algorithms* Carolyn L. Kane, 2014-08-13 These days we take for granted that our computer screens and even our phones will show us images in vibrant full color Digital color is a fundamental part of how we use our devices but we never give a thought to how it is produced or how it came about *Chromatic Algorithms* reveals the fascinating history behind digital color tracing it from the work of a few brilliant computer scientists and experimentally minded artists in the late 1960s and early 70s through to its appearance in commercial software in the early 1990s Mixing philosophy of technology aesthetics and media analysis Carolyn Kane shows how revolutionary the earliest computer generated colors were built with the massive postwar number crunching machines these first examples of computer art were so fantastic that artists and computer scientists regarded them as psychedelic even revolutionary harbingers of a better future for humans and machines But Kane shows the explosive growth of personal computing and its accompanying need for off the shelf software led to standardization and the gradual closing of the experimental field in which computer artists had thrived Even so the gap between the bright bold presence of color onscreen and the increasing abstraction of its underlying code continues to lure artists and designers from a wide range of fields and Kane draws on their work to pose fascinating questions about the relationships among art code science and media in the twenty first century

The Networked Image in Post-Digital Culture Andrew Dewdney, Katrina Sluis, 2022-07-12 This collection examines how the networked image establishes new social practices for the user and presents new challenges for cultural practitioners engaged in making curating teaching exhibiting archiving and preserving born digital objects The mode of vision and imaging established through photography over the previous two centuries has and continues to be radically reconfigured by a hybrid of algorithms computing programmed capture and display devices and an array of online platforms The image under these new conditions is filtered fluid fleeting permeable mobile and distributed and is changing our ways of seeing The chapters in this volume are the outcome of research conducted at the Centre for the Study of the Networked Image CSNI and its collaboration with The Photographers Gallery over the last ten years The book s contributors investigate radical changes in the meanings and values of hybridised media in socio technical networks and speak to the creeping automation of culture

through applications of AI social media platforms and the financialisation of data This interdisciplinary collection draws upon media and cultural studies art history art practice photographic theory user design animation museology and computer science as a way of making sense of the specific cultural consequences of the rapid succession of changes in image technologies and to bring the story up to date It will be of particular interest to scholars and students of visual culture media studies and photography

Postcolonial Surveillance Anouk Madörin,2022-09-08 *Postcolonial Surveillance* investigates the long history of the European border regime focusing on the colonial forerunners of today s border technologies The book takes a longue dur e perspective to uncover how Europe s colonial history continues to shape the high tech political present and has morphed into EU border migration policies border security and surveillance apparatuses It exposes the racial hierarchies and power relations that form these systems and highlights key moments when the past and present interact and collide such as in panoptic surveillance biopolitical registers biometric sorting and deterrent media infrastructure The technological genealogies assembled in this book reveal the unacknowledged histories that had to be rejected for the seemingly clean unbiased and neutral technologies to emerge as such

Digital Image Processing Algorithms Ioannis Pitas,1993 Provides an overview of various digital image processing algorithms in C code A programming tool for students engineers and scientists in the field of digital image processing and computer vision this book aimed at an advanced

level and is accompanied by a demo disk Modern Algorithms for Image Processing Vladimir Kovalevsky, 2018-12-10 Utilize modern methods for digital image processing and take advantage of the many time saving templates provided for all of the projects in this book Modern Algorithms for Image Processing approaches the topic of image processing through teaching by example Throughout the book you will create projects that resolve typical problems that you might encounter in the world of digital image processing Some projects teach you methods for addressing the quality of images such as reducing random errors or noise and suppressing pulse noise salt and pepper a method valuable for improving the quality of historical images Other methods detail how to correct inhomogeneous illumination not by means of subtracting the mean illumination but through division a far more efficient method Additional projects cover contrasting and a process for edge detection more efficient than Canny's for detecting edges in color images directly without converting them into black and white images What You'll Learn Apply innovative methods for suppressing pulse noise enhancing contrast and edge detection Know the pros and cons of enlisting a particular method Use new approaches for image compression and recognizing circles in photos Utilize a valuable method for straightening photos of paintings taken at an oblique angle a critical concept to understand when using flash at a right angle Understand the problem statement of polygonal approximation of boundaries or edges and its solution Use a new method for detecting bicycles in traffic Access complete source code examples in C for all of the projects Who This Book Is For C developers who work with digital image processing or are interested in informatics The reader should have programming experience and access to an integrated development environment IDE ideally NET This book does not prove or disprove theorems but suggests methods for learning valuable concepts that will enable you to customize your own image processing projects

Forget Photography Andrew Dewdney, 2021-10-19 Why we must forget photography and reject the frame of reality it prescribes and delineates The central paradox this book explores is that at the moment of photography's replacement by the algorithm and data flow photographic cultures proliferate as never before The afterlife of photography residual as it may technically be maintains a powerful cultural and representational hold on reality which is important to understand in relationship to the new conditions Forgetting photography is a strategy to reveal the redundant historicity of the photographic constellation and the cultural immobility of its epicenter It attempts to liberate the image from these historic shackles forged by art history and photographic theory More important perhaps forgetting photography also entails rejecting the frame of reality it prescribes and delineates and in doing so opens up other relationships between bodies times events materials memory representation and the image Forgetting photography attempts to develop a systematic method for revealing the limits and prescriptions of thinking with photography which no amount of revisionism of post photographic theory can get beyond The world urgently needs to unthink photography and go beyond it in order to understand the present constitution of the image as well as the reality or world it shows Forgetting photography will require a different way of organizing knowledge about the visual in culture that involves crossing different knowledges of visual culture technologies

and mediums It will also involve thinking differently about routine and creative labor and its knowledge practices within the institutions and organization of visual reproduction
