Information System Development Process Naveen Prakash,Colette Rolland,Barbara Pernici,1993 This volume aims to pave the way to a greater understanding of the information system development process Traditionally information systems have been perceived as a slice of real world history This has led to a strong emphasis on the development of conceptual models the requirements specifications of which can readily be expressed However the route to such an expression or the process of development has not received any substantial attention It is now agreed that a study of the development process affords notable benefits Firstly it helps to create an understanding of what a realistic development process is and how it proceeds from an initial specification to its acceptable representation Secondly the nature of guidance that can be provided by the next generation of CASE tools can be substantially improved It can be expected that these tools will cease to be mere drafting aids and consistency checking programs Instead it is likely that they will provide a procreative environment in which the development engineer will play an important role This tool user symbiosis should have a beneficial impact on both the productivity of the developer and on the quality of the product In bringing together researchers and practitioners from such diverse areas as AI Software Engineering Decision Support and Information Systems it is hoped this publication will take the quest to comprehend information system development processes a significant step forwards

Human Factors in Analysis and Design of Information Systems Anthony Finkelstein, Michael J. Tauber, Roland Traummüller, 1990. Information systems may be regarded as an interaction of people and machines. In the past, however, human factors took second place. Nowadays, the need to provide i) a functionality that meets the user's needs and ii) an ergonomic human-machine interface which takes the way people would like to solve their tasks into consideration are both recognised as primary concerns by the designers of information systems. The two major themes of this book are as follows: As new methods and rigorous techniques come into use, the proportion of information systems development effort devoted to analysis and design is set to increase and the study of human factors also to increase in importance. Methods, representation schemes, tools and environments cannot be applied without a systematic understanding of their use by analysts and designers in development teams. The book presents research results in this area. Much study in software development has concentrated on a human factors perspective of the end user. However, this work has to be placed in the overall context of systematic analysis and design of information systems. The book presents some new developments.
