College Geometry Howard Whitley Eves,Howard Eves,1995 College Geometry is divided into two parts Part I is a sequel to basic high school geometry and introduces the reader to some of the important modern extensions of elementary geometry extension that have largely entered into the mainstream of mathematics Part II treats notions of geometric structure that arose with the non Euclidean revolution in the first half of the nineteenth century

An Invitation to Modern Enumerative Geometry Andrea T. Ricolfi,2022-12-14 This book is based on a series of lectures given by the author at SISSA Trieste within the PhD courses Techniques in enumerative geometry 2019 and Localisation in enumerative geometry 2021 The goal of this book is to provide a gentle introduction aimed mainly at graduate students to the fast growing subject of enumerative geometry and more specifically counting invariants in algebraic geometry In addition to the more advanced techniques explained and applied in full detail to concrete calculations the book contains the proofs of several background results important for the foundations of the theory In this respect this text is conceived for PhD students or research beginners in the field of enumerative geometry or related areas This book can be read as an introduction to Hilbert schemes and Quot schemes on 3 folds but also as an introduction to localisation formulae in enumerative geometry It is meant to be accessible without a strong background in algebraic geometry however three appendices one on deformation theory one on intersection theory one on virtual fundamental classes are meant to help the reader dive deeper into the main material of the book and to make the text itself as self contained as possible

Foundations of Convex Geometry W. A. Coppel,1998-03-05 This book on the foundations of Euclidean geometry aims to present the subject from the point of view of present day mathematics taking advantage of all the developments since the appearance of Hilbert s classic work Here real affine space is characterised by a small number of axioms involving points and line segments making the treatment self contained and thorough many results being established under weaker hypotheses than usual The treatment should be totally accessible for final year undergraduates and graduate students and can also serve as an introduction to other areas of mathematics such as matroids and antimatroids combinatorial convexity the theory of polytopes projective geometry and functional analysis
