[America's Assembly Line](#) David E. Nye, 2013-02-15 From the Model T to today's lean manufacturing the assembly line as crucial yet controversial agent of social and economic transformation The mechanized assembly line was invented in 1913 and has been in continuous operation ever since It is the most familiar form of mass production Both praised as a boon to workers and condemned for exploiting them it has been celebrated and satirized We can still picture Chaplin's little tramp trying to keep up with a factory conveyor belt In America's Assembly Line David Nye examines the industrial innovation that made the United States productive and wealthy in the twentieth century The assembly line developed at the Ford Motor Company in 1913 for the mass production of Model Ts first created and then served an expanding mass market It also transformed industrial labor By 1980 Japan had reinvented the assembly line as a system of lean manufacturing American industry reluctantly adopted the new approach Nye describes this evolution and the new global landscape of increasingly automated factories with fewer industrial jobs in America and questionable working conditions in developing countries A century after Ford's pioneering innovation the assembly line

continues to evolve toward more sustainable manufacturing

From the American System to Mass Production, 1800-1932 David Hounshell,1984 David A Hounshell's widely acclaimed history explores the American genius for mass production and traces its origins in the nineteenth century American system of manufacture Previous writers on the American system have argued that the technical problems of mass production had been solved by armsmakers before the Civil War Drawing upon the extensive business and manufacturing records of leading American firms Hounshell demonstrates that the diffusion of arms production technology was neither as fast nor as smooth as had been assumed Exploring the manufacture of sewing machines and furniture bicycles and reapers he shows that both the expression mass production and the technology that lay behind it were developments of the twentieth century attributable in large part to the Ford Motor Company Hounshell examines the importance of individuals in the diffusion and development of production technology and the central place of marketing strategy in the success of selected American manufacturers Whereas Ford was the seedbed of the assembly line revolution it was General Motors that initiated a new era with its introduction of the annual model change With the new marketing strategy the technology of the changeover became of paramount importance Hounshell chronicles how painfully Ford learned this lesson and recounts how the successful mass production of automobiles led to the establishment of an ethos of mass production to an era in which proponents of Fordism argued that mass production would solve all of America's social problems
