Global and Stochastic Analysis with Applications to Mathematical Physics Yuri E. Gliklikh, 2010-12-07 Methods of global analysis and stochastic analysis are most often applied in mathematical physics as separate entities thus forming important directions in the field However while combination of the two subject areas is rare it is fundamental for the consideration of a broader class of problems This book develops methods of Global Analysis and Stochastic Analysis such that their combination allows one to have a more or less common treatment for areas of mathematical physics that traditionally are considered as divergent and requiring different methods of investigation Global and Stochastic Analysis with Applications to Mathematical Physics covers branches of mathematics that are currently absent in monograph form Through the demonstration of new topics of investigation and results both in traditional and more recent problems this book offers a fresh perspective on ordinary and stochastic differential equations and inclusions in particular given in terms of Nelson's mean derivatives on linear spaces and manifolds Topics covered include classical mechanics on non linear configuration spaces problems of statistical and quantum physics and hydrodynamics A self contained book that provides a large amount of preliminary material and recent results which will serve to be a useful introduction to the subject and a valuable resource for further research It will appeal to researchers graduate and PhD students working in global analysis stochastic analysis and mathematical physics

Stochastic Analysis and Mathematical Physics Rolando Rebolledo, 2000-05-30 The seminar on Stochastic Analysis and Mathematical Physics started in 1984 at the Catholic University of Chile in Santiago and has been an on going research activity Since 1995 the group has organized international workshops as a way of promoting a broader dialogue among experts in the areas of classical and quantum stochastic analysis mathematical physics and physics This volume consisting primarily of contributions to the Third International Workshop on Stochastic Analysis and Mathematical Physics in Spanish ANESTOC held in Santiago Chile in October 1998 focuses on an analysis of quantum dynamics and related problems in probability theory Various articles investigate quantum dynamical semigroups and new results on q deformed oscillator algebras while others examine the application of classical stochastic processes in quantum modeling As in previous workshops the topic of quantum flows and semigroups occupied an important place In her paper R Carbone uses a spectral type analysis to obtain exponential rates of convergence towards the equilibrium of a quantum dynamical semigroup in the 2 sense The method is illustrated with a quantum extension of a classical birth and death process Quantum extensions of classical Markov processes lead to subtle problems of domains This is in particular illustrated by F Fagnola who presents a pathological example of a semigroup for which the largest subalgebra of the von Neumann algebra of bounded linear operators of $L^2(\mathbb{R})$ contained in the domain of its infinitesimal generator is not a weakly dense

Global Analysis in Mathematical Physics Jurij E. Gliklich, Yu. E. Gliklikh, 1993 *Global Analysis in Mathematical Physics* E. Gliklikh, 1997 This book is the first in monographic literature giving a common treatment to three areas of applications of Global Analysis in Mathematical Physics previously considered quite distant from each other namely differential geometry applied to classical mechanics stochastic differential geometry used in quantum and statistical mechanics and infinite dimensional differential geometry fundamental for hydrodynamics The unification of these topics is made possible by considering the Newton equation or its natural generalizations and analogues as a fundamental equation of motion New general geometric and stochastic methods of investigation are developed and new results on existence uniqueness and qualitative behavior of solutions are obtained
