Handbook of AI-based Metaheuristics Anand J. Kulkarni, Patrick Siarry, 2021-09-01 At the

heart of the optimization domain are mathematical modeling of the problem and the solution methodologies. The problems are becoming larger and with growing complexity. Such problems are becoming cumbersome when handled by traditional optimization methods. This has motivated researchers to resort to artificial intelligence AI based nature inspired solution methodologies or algorithms. The Handbook of AI based Metaheuristics provides a wide ranging reference to the theoretical and mathematical formulations of metaheuristics including bio inspired swarm based socio cultural and physics based methods or algorithms their testing and validation along with detailed illustrative solutions and applications and newly devised metaheuristic algorithms. This will be a valuable reference for researchers in industry and academia as well as for all Master s and PhD students working in the metaheuristics and applications domains.

Discretization Methods and Structural Optimization – Procedures and Applications Hans A. Eschenauer, Georg Thierauf, 2012-12-06 In recent years the Finite Element Methods FEM were more and more employed in development and design departments as very fast working tools in order to determine stresses deformations eigenfrequencies etc for all kinds of constructions under complex loading conditions. Meanwhile very effective software systems have been developed by various research teams although some mathematical problems e.g. convergence have not been solved satisfactorily yet. In order to make further advances and to find a common language between mathematicians and mechanics the Society for Applied Mathematics and Mechanics GAMM agreed on the foundation of a special Committee Discretization Methods in Solid Mechanics focussing on the following problems: Structuring of various methods displacement functions hybrid and mixed approaches etc. Survey of approach functions Lagrange Hermite polynomials Spline functions Description of singularities Convergence and stability Practical and theoretical optimality to all mentioned issues single and interacting. One of the basic aims of the GAMM Committee is the interdisciplinary cooperation between mechanics mathematicians and users which shall be intensified. Thus on September 22 1985 the committee decided to hold a seminar on Structural Optimization in order to allow an exchange of experiences and thoughts between the experts of finite element methods and those of structural optimization. A GAMM seminar entitled Discretization Methods and Structural Optimization Procedures and Applications was held on October 5-7 1988 at the University of Siegen.
