with MATLAB Won Young Yang, 2009-06-18 This book is primarily intended for junior level students who take the courses on signals and systems. It may be useful as a reference text for practicing engineers and scientists who want to acquire some of the concepts required for signal processing. The readers are assumed to know the basics about linear algebra, calculus on complex numbers, differentiation and integration, differential equations, Laplace transform and MATLAB. Some knowledge about circuit systems will be helpful. Knowledge in signals and systems is crucial to students majoring in Electrical Engineering. The main objective of this book is to make the readers prepared for studying advanced subjects on signal processing, communication and control by covering from the basic concepts of signals and systems to manual like introductions of how to use the MATLAB and Simulink tools for signal analysis and filter design. The features of this book can be summarized as follows: 1. It not only introduces the four Fourier analysis tools: CTFS (continuous time Fourier series), CTFT (continuous time Fourier transform), DFT (discrete time Fourier transform) and DTFS (discrete time Fourier series) but also illuminates the relationship among them so that the readers can realize why only the DFT of the four tools is used for practical spectral analysis and why how it differs from the other ones and further think about how to reduce the difference to get better information about the spectral characteristics of signals from the DFT analysis. **Whitaker's Books in Print**
