Demkin, American Institute of Architects, 2008-03-24 This updated resource covers all aspects of architectural practice featuring new material of sustainable design managing multiple offices lifelong learning mentoring and team building revised content on programming project management construction contract administration risk management and ethics and coverage of small firm considerations as well as emerging issues such as integrated practice and integrated project delivery Jacket Creating Computer Simulation Systems Dr. Frederick Kuhl, Judith Dahmann, Richard Weatherly, 2000 This book is an introduction to the High Level Architecture for modeling and simulation The HLA is a software architecture for creating computer models and simulation out of component models or simulations HLA was adopted by the US Defense Dept The book is an introduction to HLA for application developers **Rendering Real and Imagined Buildings** B. J. Novitski, 1998 Includes Windows Macintosh interactive museum CD ROM of sketches walk throughs and animations **Co-Designers** Yanni Loukissas, 2012-06-14 Designers employ a variety of tools and techniques for speculating about buildings before they are built In their simplest form these are personal thought experiments However embracing advanced computer simulations means engaging a network of specialized people and powerful machines In this book Yanni Alexander Loukissas demonstrates that new tools have profound implications for the social distribution of design work computer simulations are technologies for collective imagination Organized around the accounts of professional designers engaged in a high stakes competition to redefine their work for the technological moment this book explores the emerging cultures of computer simulation in architecture Not only architects but acousticians fire safety engineers and sustainability experts see themselves as co designers in architecture engaging new technologies for simulation in an evolving search for the roles and relationships that can bring them both professional acceptance and greater control over design By illustrating how practices of simulation inform the social relationships and professional distinctions that define contemporary architecture the book examines the cultural transformations taking place in design practice today **Computational Modeling and Machine Learning Methods in Neurodevelopment and Neurodegeneration: from Basic Research to Clinical Applications** Pablo Martinez-Cañada, Noemi Montobbio, Roberto Maffulli, Anees Abrol, 2024-11-22 Computational models and machine learning methods are increasingly valuable tools to shed light on the dynamics that govern information processing in the nervous system as well as their disruption in pathological conditions A variety of techniques has been used to understand how networks of neurons in the brain encode elaborate and transmit information about the external world and how this information influences decision making and behavior Structural and functional abnormalities in the above mentioned networks can lead to a wide range of brain disorders Recent advances in brain simulation and machine learning techniques together with progress in the neuroimaging field have been essential for bridging the different spatial scales in the brain and
