Computer Science Logic Georg Gottlob, Etienne Grandjean, Katrin Seyr, 2006-10-11 This book constitutes the strictly refereed post workshop proceedings of the 12th International Workshop on Computer Science Logic CSL 98 held as the Annual Conference of the European Association on Computer Science Logic in Brno Czech Republic in August 1998 The 25 revised full papers presented were carefully reviewed and selected during two rounds of reviewing and revision Also included are three reviewed invited papers The papers span the whole scope of computer science logic and mathematical foundations and represent the state of the art in the area

Constraint Databases Gabriel Kuper, Leonid Libkin, Jan Paredaens, 2013-03-09 This book is the first comprehensive survey of the field of constraint databases Constraint databases are a fairly new and active area of database research The key idea is that constraints such as linear or polynomial equations are used to represent large or even infinite sets in a compact way The ability to deal with infinite sets makes constraint databases particularly promising as a technology for integrating spatial and temporal data with standard relational databases Constraint databases bring techniques from a variety of fields such as logic and model theory algebraic and computational geometry as well as symbolic computation to the design and analysis of data models and query languages The book is a collaborative effort involving many authors who have contributed chapters on their fields of expertise Despite this the book is designed to be read as a whole as opposed to a collection of individual surveys In particular the terminology and the style of presentation have been standardized and there are multiple cross references between the chapters The idea of constraint databases goes back to the late Paris Kanellakis

Lectures on the Curry-Howard Isomorphism Morten Heine Sørensen, Pawel Urzyczyn, 2006-07-04 The Curry Howard isomorphism states an amazing correspondence between systems of formal logic as encountered in proof theory and computational calculi as found in type theory For instance minimal propositional logic corresponds to simply typed lambda calculus first order logic corresponds to dependent types second order logic corresponds to polymorphic types sequent calculus is related to explicit substitution etc The isomorphism has many aspects even at the syntactic level formulas correspond to types proofs correspond to terms provability corresponds to inhabitation proof normalization corresponds to term reduction etc But there is more to the isomorphism than this For instance it is an old idea due to Brouwer Kolmogorov and Heyting that a constructive proof of an implication is a procedure that transforms proofs of the antecedent into proofs of the succedent the Curry Howard isomorphism gives syntactic representations of such procedures The Curry Howard isomorphism also provides theoretical foundations for many modern proof assistant systems e.g Coq This book gives an introduction to parts of proof theory and related aspects of type theory relevant for the Curry Howard isomorphism It can serve as an introduction to any or both of typed lambda calculus and intuitionistic logic Key features The Curry Howard Isomorphism treated as common theme Reader friendly introduction to two complementary subjects Lambda calculus and constructive logics Thorough study of the connection between calculi and

logics Elaborate study of classical logics and control operators Account of dialogue games for classical and intuitionistic logic Theoretical foundations of computer assisted reasoning The Curry Howard Isomorphism treated as the common theme Reader friendly introduction to two complementary subjects lambda calculus and constructive logics Thorough study of the connection between calculi and logics Elaborate study of classical logics and control operators Account of dialogue games for classical and intuitionistic logic Theoretical foundations of computer assisted reasoning Non-Standard Inferences in Description Logics Ralf Küsters,2003-05-15 Description logics DLs are used to represent structured knowledge Inference services testing consistency of knowledge bases and computing subconcept superconcept hierarchies are the main feature of DL systems Intensive research during the last fifteen years has led to highly optimized systems that allow to reason about knowledge bases efficiently However applications often require additional non standard inferences to support both the construction and the maintenance of knowledge bases thus making the inference procedures again incomplete This book which is a revised version of the author s PhD thesis constitutes a significant step to fill this gap by providing an excellent formal foundation of the most prominent non standard inferences The descriptions given include precise definitions complete algorithms and thorough complexity analysis With its solid foundation the book also serves as a basis for future research
