## **Computer Supported Risk Management:**

Computer Supported Risk Management Giampiero Beroggi, W.A. Wallace, 2012-12-06 Advances in information technology provide opportunities for the development of computer systems that support risk managers in complex tasks. Leading experts report on the potentials and limitations concerning the use of computer systems in risk management. Their reports are based on many years of experience in their fields which include risk analysis systems, engineering, geographic information systems, decision support systems, human machine systems, and psychology. The book addresses four major issues in computer supported risk management: Conceptual aspects, the role, design, and use of computers in risk management; Planning and policy analysis; transportation equity analysis; emergency management group decision making; Operational decision making; nuclear power monitoring; emergency response; public safety; warning; satellite tracking; Commercial applications; GIS from IIASA; InterClair from IAEA; EPA software; cleanup; decision support software; survey. This book is meant for researchers who will find the emerging issues in risk management that are motivated by the encounter of new tasks and novel technology; practitioners who will have descriptions and references of the state of the art models and software; and students who will learn the basic concepts needed to develop advanced information and decision support systems in risk management.

### **Government Reports, Announcements & Index ,1988      Computer Support for Environmental Impact**

**Assessment** Giorgio Guariso, Bernd Page, 1994 Any choice with a significant impact on the environment should in principle be the outcome of a political process reflecting the social preferences of everyone involved. Unfortunately this ideal procedure requires a level of time and money that does not justify its application for planning each specific intervention. Different methods, mainly derived from traditional investment analyses, have been proposed for providing a rational basis for environmental decisions that cannot be analysed through a public debate. These methods have proved inadequate, however, and are being replaced by Environmental Impact Assessment (EIA) as a less formal but more applicable method of incorporating environmental considerations in the decision process. Though the interpretation of EIA differs among various national and regional laws, it is now widely accepted as a potentially useful aid and is becoming a routine procedure for environmental planning and management in many countries. Computers can help to make EIA as explicit and repeatable as possible by supplying tools supporting its various phases. This book addresses topics such as the use of databases and Geographical Information Systems (GIS) in the first screening phase; the development of mathematical models or expert systems to predict the impacts; and the use of multicriteria methodologies to support the final choice. Actual implementations of integrated computer systems that can be used throughout the decision process are also described. Investing and Risk
