Computing In Statistical Science Through Apl:

Computing in Statistical Science through APL Francis John Anscombe,2012-12-06 A t the terminal seated the answering tone pond and temple bell ODAY as in the past statistical method is profoundly affected by T resources for numerical calculation and visual display The main line of development of statistical methodology during the first half of this century was conditioned by and attuned to the mechanical desk calculator Now statisticians may use electronic computers of various kinds in various modes and the character of statistical science has changed accordingly Some but not all modes of modern computation have a flexibility and immediacy reminiscent of the desk calculator They preserve the virtues of the desk calculator while immensely exceeding its scope Prominent among these is the computer language and conversational computing system known by the initials APL This book is addressed to statisticians Its first aim is to interest them in using APL in their work for statistical analysis of data for numerical support of theoretical studies for simulation of random processes In Part A the language is described and illustrated with short examples of statistical calculations Part B presenting some more extended examples of statistical analysis of data has also the further aim of suggesting the interplay of computing and theory that must surely henceforth be typical of the develop ment of statistical science   GLIM 82: Proceedings of the International Conference on Generalised Linear Models R. Gilchrist,2012-12-06 This volume of Lecture Notes in Statistics consists of the published proceedings of the first international conference to be held on the topic of generalised linear models This conference was held from 13 15 September 1982 at the Polytechnic of North London and marked an important stage in the development and expansion of the GLIM system The range of the new system tentatively named Prism is here outlined by Bob Baker Further sections of the volume are devoted to more detailed descriptions of the new facilities including information on the two different numerical methods now available Most of the data analyses in this volume are carried out using the GLIM system but this is of course not necessary There are other ways of analysing generalised linear models and Peter Green here discusses the many attractive features of APL including its ability to analyse generalised linear models Later sections of the volume cover other invited and contributed papers on the theory and application of generalised linear models Included amongst these is a paper by Murray Aitkin proposing a unified approach to statistical modelling through direct likelihood inference and a paper by Daryl Pregibon showing how GLIM can be programmed to carry out score tests A paper by Joe Whittaker extends the recent discussion of the relationship between conditional independence and log linear models and John Hinde considers the introduction of an independent random variable into a linear model to allow for unexplained variation in Poisson data   **COMPSTAT 2004 - Proceedings in Computational Statistics** Jaromir Antoch,2012-12-06 Statistical computing provides the link between statistical theory and applied statistics The content of the book covers all aspects of this link from the development and implementation of new statistical ideas to user experiences and software evaluation The proceedings should appeal to anyone working in statistics and using computers whether in
