LISP 1.5 Programmer's Manual John McCarthy, Paul W. Abrahams, Daniel J. Edwards, Timothy P. Hart, Michael I. Levin, 1962-08-15 The manual describes LISP a formal mathematical language LISP differs from most programming languages in three important ways The first way is in the nature of the data The LISP language is designed primarily for symbolic data processing used for symbolic calculations in differential and integral calculus electrical circuit theory mathematical logic game playing and other fields of artificial intelligence The manual describes LISP a formal mathematical language LISP differs from most programming languages in three important ways The first way is in the nature of the data In the LISP language all data are in the form of symbolic expressions usually referred to as S expressions of indefinite length and which have a branching tree type of structure so that significant subexpressions can be readily isolated In the LISP system the bulk of the available memory is used for storing S expressions in the form of list structures The second distinction is that the LISP language is the source language itself which specifies in what way the S expressions are to be processed Third LISP can interpret and execute programs written in the form of S expressions Thus like machine language and unlike most other high level languages it can be used to generate programs for further executions [Common LISP](#) Stuart
