High-Performance Computing R.J. Allan,M.F.

Guest,A.D. Simpson,D.S. Henty,D. Nicole,2012-12-06 Over the past decade high performance computing has demonstrated the ability to model and predict accurately a wide range of physical properties and phenomena Many of these have had an important impact in contributing to wealth creation and improving the quality of life through the development of new products and processes with greater efficacy efficiency or reduced harmful side effects and in contributing to our ability to understand and describe the world around us Following a survey of the U K s urgent need for a supercomputing facility for academic research see next chapter a 256 processor T3D system from Cray Research Inc went into operation at the University of Edinburgh in the summer of 1994 The High Performance Computing Initiative HPCI was established in November 1994 to support and ensure the efficient and effective exploitation of the T3D and future generations of HPC systems by a number of consortia working in the frontier areas of computational research The Cray T3D now comprising 512 processors and total of 32 GB memory represented a very significant increase in computing power allowing simulations to move forward on a number of fronts The three fold aims of the HPCI may be summarised as follows 1 to seek and maintain a world class position in computational science and engineering 2 to support and promote exploitation of HPC in industry commerce and business and 3 to support education and training in HPC and its application

Computer Simulation Studies in Condensed-Matter Physics XVI David P. Landau,Steven P. Lewis,Heinz-Bernd Schüttler,2012-12-06 Because of the tremendous increase in the power and utility of computer simulations in 1986 The University of Georgia created the Center for Simulational Physics as a unit devoted to the use of simulations in research and teaching As the international simulations community expanded further we sensed a need for a meeting place for both experienced simulators and beginners to present and discuss new techniques and recent results in an environment which promoted a lively exchange of information As a consequence the Center for Simulational Physics established an annual workshop on Recent Developments in Computer Simulation Studies in Condensed Matter Physics This year s workshop was the 16th in this series and the continued interest shown by the simulations community demonstrates quite clearly the useful purpose that these meetings have served The latest workshop was held at The University of Georgia February 24-28 2003 and these proceedings provide a status report on a number of important topics This volume is published with the goal of timely dissemination of the material to a broader audience We wish to offer a special thanks to IBM Corporation and to the National Science Foundation for partial support of

this year's workshop This volume contains both invited papers and contributed presentations on problems in both classical and quantum condensed matter physics It is our hope that each reader will benefit from specialized results as well as profit from exposure to new algorithms methods of analysis and conceptual developments
