

1. A Brief Description of Calculus

In this lesson, you'll get an overview of calculus. You'll also learn how to recognize the best strategies to use for the lesson and study of each section.

There are two fundamental operations that are used in calculus. They are the integrations, which is a process that finds the area.

The second fundamental operation is differentiation, which is a process that changes variables in the function. It is the opposite of integration.

Integration and differentiation are inverse processes. If you know the derivative of a function, you can find the original function. If you know the original function, you can find the derivative.
