

Underground Ant Engineer

Take a peek inside an ant colony

Construction

Ants hollow out a network of tunnels and underground chambers grain by grain using their mandibles (insect mouthpart).

Ventilating the nest

In order to maintain an even temperature and ensure a constant flow of oxygen inside, ants build porous turrets above ground.

Entry points

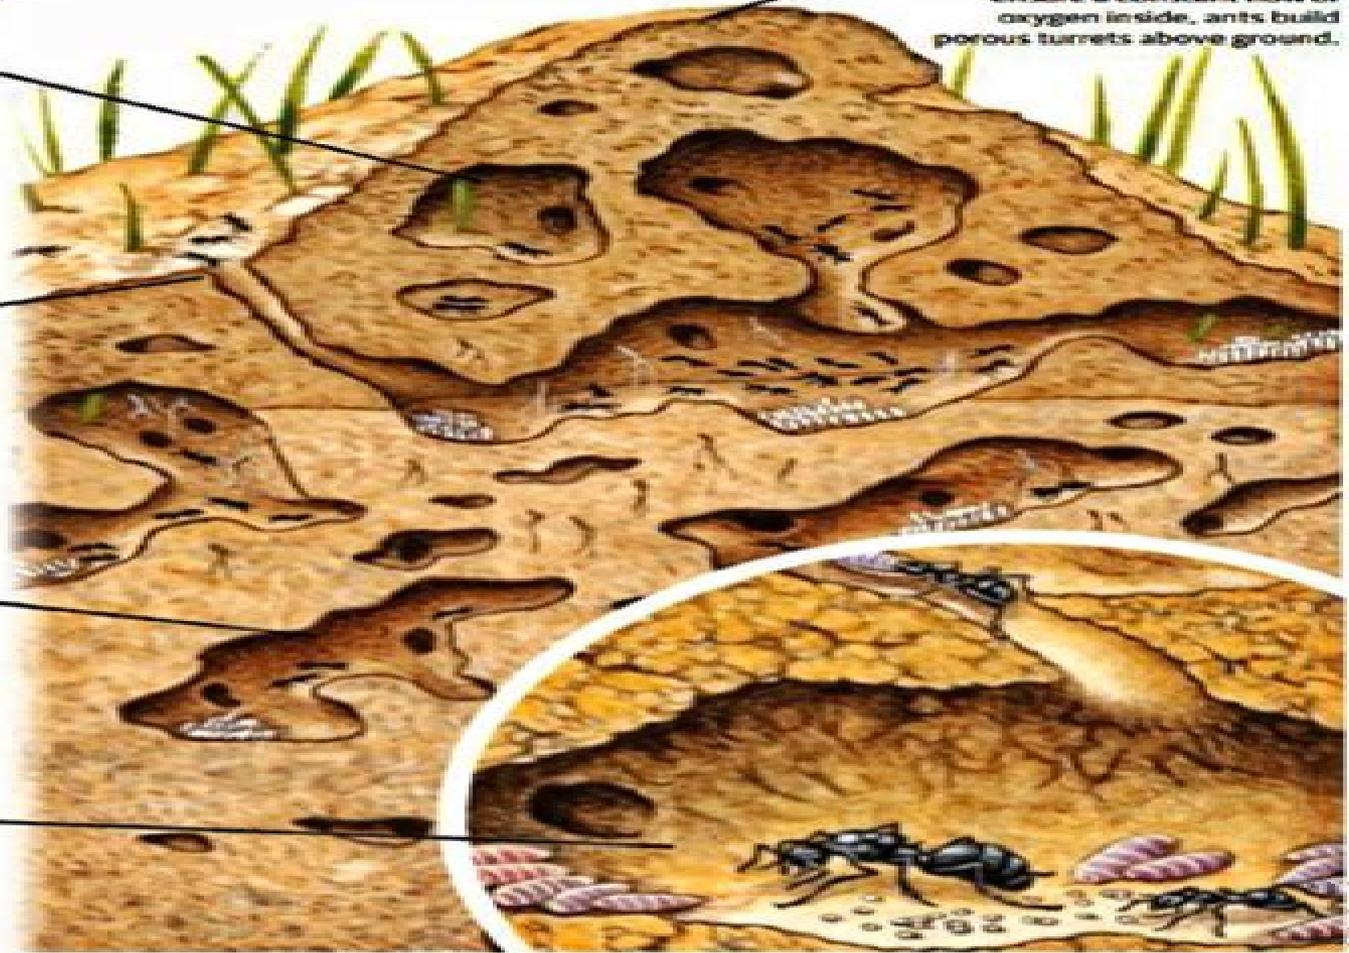

There are often a few entry and exit points to an ant nest, ensuring worker ants have quick access.

Expansion

As the colony grows, worker ants will continue to expand the size of the nest. Some can be as deep as 3m (9.8ft).

Living space

Each tunnel connects to various chambers, which can be used to house food, ant eggs and the oversized queen of the colony.

Ant Colony:

Ant Colony Optimization Avi Ostfeld, 2011-02-04 Ants communicate information by leaving pheromone tracks. A moving ant leaves in varying quantities some pheromone on the ground to mark its way. While an isolated ant moves essentially at random, an ant encountering a previously laid trail is able to detect it and decide with high probability to follow it, thus reinforcing the track with its own pheromone. The collective behavior that emerges is thus a positive feedback where the more the ants following a track, the more attractive that track becomes for being followed, thus the probability with which an ant chooses a path increases with the number of ants that previously chose the same path. This elementary ant's behavior inspired the development of ant colony optimization by Marco Dorigo in 1992, constructing a meta-heuristic stochastic combinatorial computational methodology belonging to a family of related meta-heuristic methods such as simulated annealing, Tabu search, and genetic algorithms. This book covers in twenty chapters state-of-the-art methods and applications of utilizing ant colony optimization algorithms. New methods and theory such as multi-colony ant algorithm based upon a new pheromone arithmetic crossover and a repulsive operator, new findings on ant colony convergence, and a diversity of engineering and science applications from transportation, water resources, electrical, and computer science disciplines are presented.

The Ants Bert Hölldobler, Edward O. Wilson, 1990 This landmark work is a thoroughgoing survey of one of the largest and most diverse groups of animals on the planet. Hölldobler and Wilson review in exhaustive detail virtually all topics in the anatomy, physiology, social organization, ecology, and natural history of the ants.

Agent and Multi-Agent Systems: Technologies and Applications Geun Sik Jo, Lakhmi Jain, 2008-03-14 Following from the very successful First KES Symposium on Agent and Multi-Agent Systems Technologies and Applications KES AMSTA 2007 held in Wroclaw, Poland, 31 May - 1 June 2007, the second event in the KES AMSTA symposium series KES AMSTA 2008 was held in Incheon, Korea, March 26-28, 2008. The symposium was organized by the School of Computer and Information Engineering, Inha University, KES International, and the KES Focus Group on Agent and Multi-Agent Systems. The KES AMSTA Symposium Series is a sub-series of the KES Conference Series. The aim of the symposium was to provide an international forum for scientific research into the technologies and applications of agent and multi-agent systems. Agent and multi-agent systems are related to the modern software which has long been recognized as a promising technology for constructing autonomous, complex, and intelligent systems. A key development in the field of agent and multi-agent systems has been the specification of agent communication languages and formalization of ontologies. Agent communication languages are intended to provide standard declarative mechanisms for agents to communicate knowledge and make requests of each other, whereas ontologies are intended for conceptualization of the knowledge domain. The symposium attracted a very large number of scientists and practitioners who submitted their papers for nine main tracks concerning the methodology and applications of agent and multi-agent systems, a doctoral track

The origin of evolutionary algorithms was an attempt to mimic some of the processes taking place in natural evolution Although the details of biological evolution are not completely understood even nowadays there exist some points supported by strong experimental evidence Evolution is a process operating over chromosomes rather than over organisms The former are organic tools encoding the structure of a living being i e a creature is built decoding a set of chromosomes Natural selection is the mechanism that relates chromosomes with the efficiency of the entity they represent thus allowing that efficient organism which is well adapted to the environment to reproduce more often than those which are not The evolutionary process takes place during the reproduction stage There exists a large number of reproductive mechanisms in Nature Most common ones are mutation that causes the chromosomes of offspring to be different to those of the parents and recombination that combines the chromosomes of the parents to produce the offspring Based upon the features above the three mentioned models of evolutionary computing were independently and almost simultaneously developed **Mechatronics and Intelligent Materials II** Ran Chen,Wen Pei Sung,2012-03-15 Selected peer reviewed papers from the 2012 International conference on Mechatronics and Intelligent Materials MIM 2012 May 18 19 2012 GuiLin China **The Encyclopaedia Britannica ...** ,1898 Progress in Mechatronics and Information Technology Keon Myung Lee,Prasad Yarlagadda,Yang Ming Lu,2013-11-15 Selected peer reviewed papers from the 2013 International Conference on Mechatronics and Information Technology ICMIT 2013 October 19 20 2013 Guilin China **Cornell Rural School Leaflet** ,1910 **Year Book** Illinois Farmers' Institute.
