Biotechnology of Antibiotics and Other Bioactive Microbial Metabolites G. Lancini, R. Lorenzetti, 2013-11-11 In response to the field's need for an introductory text the authors have distilled the vast and scattered literature relating to the biotechnology of microbial secondary metabolites. General biology, biosynthesis, the search for novel metabolites and techniques for strain improvement are all discussed to provide undergraduate and graduate students with a concise, readable overview of the field.

Bacterial Resistance and Susceptibility to Chemotherapeutic Agents L. E. Bryan, 1982-04-29

T Cell Hybridomas H.v. Boehmer, W. Haas, G. Köhler, F. Melchers, J. Zeuthen, 2012-12-06 For more than ten years cell fusion techniques have been applied in studies on various lymphocyte functions. Ig expression was first studied in hybrids obtained by fusing myeloma cells with fibroblasts 1 or lymphomas 2 both of which do not produce Ig and with Ig producing myelomas 3 or human blood lymphocytes 4. Köhler and Milstein 5 fused a myeloma with spleen cells from immunized mice. Up to 10% of the hybrids obtained secreted antibodies specific for the immunizing antigen. This suggested that plasma cells preferentially fused with the myeloma cells, a finding which was of enormous practical value. It was found that both B and T lymphocytes could be fused with the T cell tumor BW5147 which is however not permissive for Ig synthesis 6. A very large number of T cell hybridomas were generated by fusing BW5147 with cell populations containing in vivo or in vitro activated cells 7. The hybrids showed no specific T cell functions and binding assays for T cell receptors were not available. In particular no hybrids were obtained which expressed specific cytolytic activity that could be tested in short term Cr release assays 8. However the frustrations expressed about these failures published in January 1978 9 were relieved by Taniguchi and Miller's publication a few months later of T cell hybridomas producing antigen specific suppressor factors 10. Unfortunately their hybrids rapidly lost factor production.

Antibiotics and Antibiotic Resistance in the Environment Carlos F. Amabile-Cuevas, 2015-12-30 The presence of antibiotics, antibiotic resistance genes and antibiotic resistant bacteria in the environment is a cause of growing worldwide concern as it reveals the extensive impact of antibiotic abuse and other human related pressures upon microbes. The field of detecting and measuring resistance in the environment has rapidly evolved to a systematic search of organisms and genes. This book will review the available evidence and hypotheses on where antibiotic resistance is coming from and for how long it has been there. Further it will discuss involved maintenance pressures, resistance spread, traits and laboratory and in silico strategies to further investigate antibiotic resistance.
