Certain Places:

Fault Lines of Globalization Hans Lindahl, 2013-09-26 The question whether and how boundaries might individuate and thereby be constitutive features of any imaginable legal order has yet to be addressed in a systematic and comprehensive manner by legal and political theory This book seeks to address this important omission providing an original contribution to the debate about law in a global setting Against the widely endorsed assumption that we are now moving towards law without boundaries it argues that every imaginable legal order global or otherwise is bounded in space time membership and content The book is built up around three main insights Firstly that legal orders can best be understood as a form of joint action in which authorities mediate and uphold who ought to do what where and when with a view to realising the normative point of acting together Secondly that behaviour can call into question the boundaries that determine who ought to do what where and when a legality Thirdly that this a legality reveals boundaries as marking a limit and to a lesser or greater extent a fault line of the respective legal order Legal boundaries reveal ways of ordering the who what where and when of behaviour which have been excluded yet which remain within the range of practical possibilities accessible to the collective limits However legal boundaries also intimate an order which exceeds the range of possibilities accessible to that collective the fault line of the respective legal order Careful analysis of a wide range of legal orders including nomadism Roman law classical international law ius gentium multinationals cyberlaw lex mercatoria the EU global regimes of human rights and space law validates this thesis What sense then can we make of the normativity of the law if there can be no inclusion without exclusion Arguing that legal and political theories misunderstand how legal boundaries do their work of including and excluding the book develops a normative theory of legal order which is alternative to both communitarianism and cosmopolitanism

Higher Education, Place, and Career Development Rosie Alexander, 2024-11-21 Drawing connections between the findings of a research project following young graduates from the Scottish islands of Orkney and Shetland current international evidence and theoretical literature this book argues that understanding rural and island student transitions can expose the wider dynamics of place and mobility at play during student and early career experiences Highlighting the importance of a career perspective Rosie Alexander encourages readers to consider how career pathways develop across time and across transition points unsettling the notion of a straightforward transition through university into the workplace The book uncovers how student trajectories are developed through interweaving dynamics of relationships place and career routes and unpacks the implications for policymakers and practitioners It contends that a much greater spatial awareness is necessary to understand and support the educational and career pathways of higher education students This is a crucial read for higher education researchers policymakers and students interested in rurality as well as access to and transition from higher education
