Making Better Buildings Chris Magwood, Jen Feigin, 2014-03-25. Sustainable building from the ground up: the pros and cons of the latest green and natural materials and technologies. Crit, 2001.

Building with Vision Dan Imhoff, 2001. Part green building primer, part architectural photo essay. This is an essential resource for professionals and homeowners interested in the leading edge of environmental building. Imhoff traveled extensively to document and photograph beautiful and novel alternatives to wood-intensive building. *Building with Vision* is the first book to link residential building with forest impacts. Nearly 1.5 million new houses are built in the United States each year, 90 percent framed with wood, and the average house consumes an acre's worth of trees. But as *Building with Vision* shows, from framing and siding to new building systems and finish materials, there are many ways architects, contractors, and homeowners can make high-quality, resourceful, long-lasting, and beautiful decisions. Details include building techniques as well as materials including Styrofoam, steel, concrete, straw bales, rammed earth, adobe, and much more.

Home Power, 2004. *Rammed Earth* Peter Walker, 2005. This book presents state-of-the-art practical guidance on material selection, construction, structural design, architectural detailing, maintenance, and repair of rammed earth.

Housing and Society, 2005. *Ecological Design and Building Schools* Sandra Leibowitz Earley, 2005. This first and only directory of sustainable architecture and green building educational programs in North America features an annotated listing of the best schools and educational centers and compares in detail the offerings of their programs.

Mother Earth News Guide to Homes, 2003.

Mainstreaming Sustainable Architecture Ed Paschich, Jan Zimmerman, 2001. Sustainable Architecture is a term that groups together a number of approaches to architecture that choose materials and techniques that can be maintained for the long term without exhausting non-renewable resources. *Mainstreaming Sustainable Architecture* illustrates a systems approach to design and construction in which the various components such as passive solar techniques, earth air conditioning, vapor permeable ceilings, and cellulose insulation operate synergistically to achieve environmental goals. This case study of Casa de Paja House of Straw demonstrates that many elements of sustainable architecture can be incorporated without sacrificing sophisticated design and without added expense. While no technical background is needed to understand the principles behind sustainable design, architects and engineers will find enough detail in the drawings and appendices to adapt these techniques to their own construction.

EDRA; Proceedings of the Annual Environmental Design Research Association Conference Environmental Design Research Association, 2007.

Sustainable Development and Planning II A. G. Kungolos, C. A. Brebbia, Elias Beriatos, 2005.

Natural Building Materials Everett Sinclair, 2005-02-21. *Natural Building Materials* explores the resurgence of eco-friendly construction, advocating for a return to locally sourced resources and time-honored techniques. The book champions sustainable

architecture by delving into the properties of natural building materials such as timber bamboo earth and stone and by investigating how these materials can be adapted for modern use It highlights how vernacular architecture often provides ingenious solutions tailored to local climates and community needs offering a model for reducing the environmental impact of the building industry This book examines diverse architectural techniques across various regions showcasing how they can be integrated with modern design principles It traces the evolution of building practices emphasizing the importance of cultural heritage in shaping sustainable designs Contemporary case studies illustrate the practical application of sustainable development principles demonstrating how environmental design can be both feasible and beneficial The book progresses from defining core concepts and exploring material properties to examining construction techniques and culminating in real world examples This approach allows readers to understand both the theoretical underpinnings and practical applications of natural building making it a valuable resource for architects designers and anyone interested in eco friendly construction
