Dam Buster Richard Morris,2023-05-04

A stunningly good and surely definitive biography of one of the most fascinating British engineers ever to have lived JAMES HOLLAND Barnes Wallis is remembered for contributions to aviation that spanned most of the 20th century from airships at its start to reusable spacecraft near the end In the years between he pioneered new kinds of aircraft structure bombs to alter the way in which wars are fought and aeroplanes that could change shape in flight Later work extended to radio telescopes prosthetic limbs and plans for a fleet of high speed cargo submarines to travel the world's oceans in silence For all his fame little is known about the man himself Dam Buster draws on family records to reveal someone thick with contradictions a Victorian who in his imagination ranged far into the 21st century a romantic for whom nostalgic pastoral and advanced technology went together an unassuming man who kept a close eye on his legacy Wallis was last in a line of engineers who combined hands on experience with searching vision Richard Morris sets out to locate him in Britain's grand narrative

A History of Aviation at Brooklands in 100 Objects Nigel Spooner,2024-07-30 At the dawn of the twentieth century mankind had not yet achieved powered flight The main motive power then was provided by steam engines heavy dirty and inefficient If one wanted to travel over seas one had to travel on them A journey from London to New York by steam driven train and ship took more than 6 days By the time the same century drew to a close in December 1999 air travel was the normal choice for long journeys Millions of people every day flew comfortably and safely in pressurised aluminium airliners propelled by simple clean and efficient gas turbine engines The same journey from London to New York could be achieved at supersonic speed in less than 6 hours For much of that century many of the extraordinary developments that moved aviation from fragile wood and fabric biplanes to supersonic transports were achieved on 330 acres of low lying former estate farmland in Surrey England The estate was called Brooklands Those marshy acres were transformed from 1907 into the world's first custom built motor racing circuit then a rapidly developing aerodrome and finally one of the country's largest aircraft factories employing tens of thousands of people Nearly 19 000 aircraft of many different types were built at Brooklands during nine decades of peace and war By the 1980s however it was being eclipsed by larger manufacturing sites elsewhere with longer runways and better communications links its owner by then called British Aerospace finally closed the factory in 1989 This book tells the history of those amazing developments through 100 of the key aircraft engines places and other objects that can still be seen either in or near Brooklands Museum or in other locations around the country It also highlights the stories of six designers whose inspiring creativity produced aircraft engines and weapons ranging from Camel to Concorde Fury to Harrier Wellington to Viscount Merlin to Olympus Between them Thomas Sopwith Barnes Wallis Rex Pierson Sydney Camm Stanley Hooker and George Edwards were responsible for much of what was designed built and flown not only at Brooklands but elsewhere too The book is arranged in successive historical episodes but the many links between

the objects and the designers should allow readers to follow different paths if they so wish It is not intended as a technical reference but rather to inspire the reader to seek out the objects and discover more about them **Barnes Wallis** Peter Pugh,2005 Best known as the inventor of the bouncing bomb Barnes Wallis was a brilliant engineer whose bold vision was immortalised in the film Dambusters This biography looks at the life of a man who helped to change the course of history

Bouncing-bomb Man Iain Robert Murray,2009 Barnes Wallis's work covers far more than just basketwork bombers and bouncing bombs So how did his engineering genius take ideas from airships and push them forward to aircraft faster than Concorde Barnes Wallis is best known as the boffin behind the famous bouncing bomb used by 617 Squadron to breach the Ruhr dams in 1943 but his work covers a far wider canvas It ranges from airships through novel aircraft structures and special weapons to long range supersonic aircraft and an extensive patent portfolio This book describes the huge breadth of Wallis's work It shows why his genius brought totally new ideas into these fields and reveals the science and engineering expertise that he deployed to make them work *Dam Busters* James Holland,2013-11-04 The story of the British made bombs Upkeep and Highball successfully dropped on Nazi dams has never been told in such depth before Daily Mail UK The night of May 16 1943 Nineteen specially adapted Lancaster bombers take off from an RAF airfield in Lincolnshire England each with a huge nine thousand pound cylindrical bomb strapped underneath it Their mission to destroy three hydroelectric dams that power the Third Reich's war machine It was a suicide mission from the outset First the men had to fly extremely low at night and in tight formation over miles of enemy occupied territory Then they had to drop with pinpoint precision a complicated spinning cylindrical bomb that had never before been used operationally More than that the entire operation had to be put together in less than ten weeks in order to hit the dams when water levels were still high enough for the bombs to be effective The visionary aviation engineer Barnes Wallis hadn't even drawn up plans for his concept when the bouncing bomb was green lighted What followed was an incredible race against time that despite numerous setbacks became one of the most successful and significant bombing raids of all time Holland has delved into the new trove of declassified documents to shed light on this weapons program the politics of its development and the eventual mission The Wall Street Journal An impeccably researched work in the style of a fast paced techno thriller Publishers Weekly Extremely detailed but never dull Holland offers a definitive nuts and bolts history Kirkus Reviews A well written study of engineering and invention operating under great pressure For all World War II history buffs Library Journal starred review
