Masuch, 2013-03-09 A selection of papers presented at the international conference Applied Logic Logic at Work held in Amsterdam in December 1992 Nowadays the term applied logic has a very wide meaning as numerous applications of logical methods in computer science formal linguistics and other fields testify Such applications are by no means restricted to the use of known logical techniques at its best applied logic involves a back and forth dialogue between logical theory and the problem domain The papers focus on the application of logic to the study of natural language in syntax semantics and pragmatics and the effect of these studies on the development of logic In the last decade the dynamic nature of natural language has been the most interesting challenge for logicians Dynamic semantics is here applied to new topics the dynamic approach is extended to syntax and several methodological issues in dynamic semantics are systematically investigated Other methodological issues in the formal studies of natural language are discussed such as the need for types modal operators and other logical operators in the formal framework Further articles address the scope of these methodological issues from other perspectives ranging from cognition to computation The volume presents papers that are interesting for graduate students and researchers in the field of logic philosophy of language formal semantics and pragmatics and computational linguistics      **Mathematical Problems from Applied Logic II** Dov Gabbay, Sergei Goncharov, Michael Zakharyashev, 2007-07-28 Mathematical Problems from Applied Logic II presents chapters from selected world renowned logicians Important topics of logic are discussed from the point of view of their further development in light of requirements arising from their successful application in areas such as Computer Science and AI language Fields covered include logic of provability applications of computability theory to biology psychology physics chemistry economics and other basic sciences computability theory and computable models logic and space time geometry hybrid systems logic and region based theory of space Contributors include Sergei Artemov USA John Case USA Sergei Goncharov Russia Judit X Madar sz Istv n N meti and Gergely Sz kely Hungary Anil Nerode USA and Dimiter Vakarelov Bulgaria      Mathematical Problems from Applied Logic I Dov M. Moura,2017-02-04 This book provides an introduction to logic and mathematical induction which are the basis of any deductive computational framework A strong mathematical foundation of the logical engines available in modern proof assistants such as the PVS verification system is essential for computer scientists mathematicians and engineers to increment their capabilities to provide formal proofs of theorems and to certify the robustness of software and hardware systems The authors present a concise overview of the necessary computational and mathematical aspects of logic placing emphasis on both natural deduction and sequent calculus Differences between constructive and classical logic are highlighted through several examples and exercises Without neglecting classical aspects of computational logic the authors also highlight the connections between logical deduction rules and proof commands in proof assistants presenting simple examples of formalizations of the correctness of algebraic functions and algorithms in PVS Applied Logic for Computer Scientists will not only benefit students of computer science and mathematics but also software hardware automation electrical and mechatronic engineers who are interested in the application of formal methods and the related computational tools to provide mathematical certificates of the quality and accuracy of their products and technologies *Problem-solving Principles for BASIC Programmers* William E. Lewis,1981 **Creating New Knowledge in Management** Ellen

O'Connor,2011-12-07 *Creating New Knowledge in Management* rediscovers lost sources in the work of Mary Parker Follett and Chester Barnard providing a foundation for management as a unique and coherent discipline This book begins by explaining that research universities and the management field in particular have splintered into smaller and less related parts It then recovers a lost tradition of integrating management and the humanities exploring ways of building on this convention to advance the unique art and science of business By way of Follett and Barnard s work author Ellen S O Connor demonstrates how the shared values purposes and customs of management and the humanities can be used to build an enterprise that will help to meet the challenges of business today Igniting approaches to management that build on humanistic traditions is the ultimate goal of this book Therefore the text ends with two experiments one in the classroom and one with a business executive that take up this call and offer a perspective on where management must go next
