

DIRECT ENERGY CONVERSION

1. PHOTOVOLTAICS (PV)

1.1. Basic Principles of Photovoltaics (PV)

1) Photoelectric Effect

The foundational principle behind photovoltaics is the **photoelectric effect**, where light energy from the Sun knocks electrons loose from atoms within the semiconductor material, typically silicon. This movement of electrons generates an electric current.

When photons (light particles) hit the solar cell, they transfer their energy to electrons in the semiconductor material, causing the electrons to break free from their atoms and flow through the material as electricity.
