Altered Proteins & Aging Adelman, George S. Roth, 1983

Protein Metabolism and Homeostasis in Aging

Nektarios Tavernarakis, 2011-01-11 Aging is loosely defined as the accumulation of changes in an organism over time. At the cellular level, such changes are distinct and multidimensional. DNA replication ceases, cells stop dividing, they become senescent, and eventually die. DNA metabolism and chromosomal maintenance, together with protein metabolism, are critical in the aging process. The focus of this book is on the role of protein metabolism and homeostasis in aging. An overview is provided of the current knowledge in the area, including protein synthesis accuracy and repair, post-translational modifications, degradation, and turnover, and how they define and influence aging. The chapters mainly focus on well-characterised factors and pathways, but new areas are also presented where associations with aging are just being elucidated by current experimental data. Protein turnover, the balance between protein synthesis and protein degradation, are carefully maintained in healthy cells. Chapters 1 and 2 illustrate that aging cells are characterised by alterations in the rate, level, and accuracy of protein synthesis compared to young ones, and that mRNA translation, essential for cell growth and survival, is controlled at multiple levels. The theory that growth and somatic maintenance are believed to be antagonistic processes is described in Chapter 3: inhibition of protein synthesis results in decreased rates of growth and development but also confers an extension of lifespan, as shown for example by the effects of dietary restriction in various model organisms.

Biology of Longevity and Aging Robert Arking, 2019-01-10 An introductory text to the biology of aging and longevity, offering a thorough review of the field.

Biology of Aging Robert Arking, 2006-02-02 Robert Arking's *Biology of Aging* 3rd edition is an introductory text to the biology of aging, which gives advanced undergraduate and graduate students a thorough review of the entire field. His prior two editions have also served admirably as a reference text for clinicians and scientists. This new edition captures the extraordinary recent advances in our knowledge of the ultimate and proximal mechanisms underlying the phenomenon of aging. As a result, six important conceptual changes are included here: Clarified distinctions between the biological mechanisms involved in longevity determination and those involved in senescent processes; A new conceptual framework around which we can organize all the new facts about aging; This will assist readers to make sense of the information and use the data to form their own ideas; Increased knowledge of aging cells has led to new ideas on how a cell transits from a healthy state to a senescent state while still allowing for high levels of intra- and inter-specific variability; Discussion of senescent mechanisms assists the reader to understand that aging is a non-programmatic loss of function, likely arising from the loss of regulatory signals, and so is modifiable in the laboratory; Because the standard evolutionary story does not fully explain the evolution of social organisms, this edition also includes recent work dealing with intergenerational resource transfers. Lastly, if aging mechanisms are plastic, then the demand to move these anti-aging interventions into the human arena will inevitably grow. A discussion of the biological and ethical arguments on both sides of the question frames

the question in an appropriate manner The mass of data related to aging is summarized into fifteen focused chapters each dealing with some particular aspect of the problem The last two chapters integrate all this material into a coherent view of how the relevant biological processes change over the life span This view is expressed in two non technical figures you might say that the whole book exists to fully support Figs 9 4 14 9 whose meanings are elucidated as the reader progresses through the book

Aging Mechanisms II Nozomu Mori,2022-04-28 This book describes the recent advancement of basic research on the biology of aging and longevity studies in various organisms as well as the neurobiology of aging and neurodegeneration mechanisms Chapters present new findings and conceptual developments concerning the basic mechanisms of aging and longevity determination As a follow up volume to the previous book *Aging Mechanisms 2015* it overviews the rapid progress of aging research introducing new topics from leading laboratories in Japan Chapter contributors are selected based on recent scientific achievements on the mechanisms of aging in various model organisms including yeast worm *C elegans* fly *Drosophila* mice and rats Chapters are ordered from the discussion on molecular and cellular levels to physiological and systemic levels The book also provides an overview of aging science in the region and helps readers quickly grasp who is doing what in this research area As the aging of population becomes an ever more pressing issue in Asia advancing the understanding of basic mechanisms of organism aging and longevity determination will be crucial to developing more effective therapies and protective strategies Researchers and graduate students in biomedical aging research will find this as a rich source of information and a stimulus to novel research directions

Quantitative Proteome Analysis Kazuhiro Imai,Sam Li Fong Yau,2013-08-05 This book focuses on the advantages and disadvantages of each of the commonly used quantitative proteomic methods in terms of accuracy sensitivity and reproducibility It also concentrates on the effective applications of these methods that resulted in many discoveries of the role of the proteins expressed in living cells and biological fluids The first part of the book focuses on the description of advantages and disadvantages of each of the commonly used quantitative proteomic methods in terms of accuracy sensitivity and especially reproducibility The second part of the book focuses on providing concise descriptions of the effective applications of these methods to demonstrate how they have resulted in many important discoveries of the roles of the proteins expressed in living cells

Nutritional Aspects Of Aging Linda H. Chen,2018-01-18 The first section in Volume 1 describes the fundamentals of nutrition and aging which include research strategies for the study of nutrition and aging The nutritional modulation of the aging process which has provided a major breakthrough in the field of nutrition and longevity is also discussed These include biomedical influences and social and psychological aspects Section 3 includes dietary characteristics of the elderly population and methods for the assessment of nutritional status The nutritional status of the elderly with respect to individual nutrients as determined by dietary survey and by biochemical methods is described in Section 4 Section 4 also includes discussion on nutrient metabolism requirements nutritional imbalances and deficiencies of nutrients Energy metabolism and

obesity as a factor in pathogenesis of diseases are also discussed

The Molecular Nutrition of Amino Acids and Proteins Dominique Dardevet,2016-06-08 The Molecular Nutrition of Amino Acids and Proteins provides an in depth look at the involvement and role of amino acids and proteins in molecular nutrition Editor Dominique Dardevet has assembled a collection of chapters written by leading researchers and top professors that provide the reader with a comprehensive understanding of amino acids and proteins The book provides an introduction to the fundamentals of amino acids and proteins as well as the composition of food It then delves into the molecular biology of the cell and genetic machinery and its function The Molecular Nutrition of Amino Acids and Proteins also features reference guides for terms and bullet point summaries making it readily accessible to novices while still providing the most up to date and detailed information that experienced researchers need Provides a gentle introduction to the subject by first addressing nutritional information and then building in molecular aspects clearly establishing fundamental information for the reader Facilitates reader comprehension by including succinct summary points in each chapter Contains a glossary of definitions that allows readers to easily reference terms Provides both a deep and broad understanding of the subject by containing overviews as well as detail focused chapters

Protein Metabolism in Aging Harold L. Segal,Morton Rothstein,Ettore Bergamini,1990-04-17 This work examines recent research in the biochemical basis of aging and offers contributions from an international group of researchers actively engaged in this field It provides valuable new data on how aging alters protein metabolism and structure the cell endocrine and neurobiological functions and free radicals The book also explores the effects of dietary restrictions on aging Specific topics include mechanisms of protein degradation turnover of plasma membrane proteins in hepatocytes genetic biochemical and molecular studies of cellular senescence effects of aging and dietary restrictions on protein synthesis and physiological antioxidant defense and repair systems
