

Euler's Method

- At each step approximate the solution curve by the tangent line.

$$y(x_0 + h) \approx y(x_0) + y'(x_0)h, \quad x_1 = x_0 + h$$

$$y(x_1) \approx y_0 + f(x_0, y_0)h$$

Set $y_1 = y_0 + f(x_0, y_0)h,$

so $y(x_1) \approx y_1$

Rani,2014-11-21 **Approximate Analytical Methods for Solving Ordinary Differential Equations ODEs** is the first book to present all of the available approximate methods for solving ODEs eliminating the need to wade through multiple books and articles It covers both well established techniques and recently developed procedures including the classical series solution method diverse perturbation methods pioneering asymptotic methods and the latest homotopy methods The book is suitable not only for mathematicians and engineers but also for biologists physicists and economists It gives a complete description of the methods without going deep into rigorous mathematical aspects Detailed examples illustrate the application of the methods to solve real world problems The authors introduce the classical power series method for solving differential equations before moving on to asymptotic methods They next show how perturbation methods are used to understand physical phenomena whose mathematical formulation involves a perturbation parameter and explain how the multiple scale technique solves problems whose solution cannot be completely described on a single timescale They then describe the Wentzel Kramers and Brillouin WKB method that helps solve both problems that oscillate rapidly and problems that have a sudden change in the behavior of the solution function at a point in the interval The book concludes with recent nonperturbation methods that provide solutions to a much wider class of problems and recent analytical methods based on the concept of homotopy of topology

Nonlinear Ordinary Differential Equations Martin Hermann,Masoud Saravi,2016-05-09 The book discusses the solutions to nonlinear ordinary differential equations ODEs using analytical and numerical approximation methods Recently analytical approximation methods have been largely used in solving linear and nonlinear lower order ODEs It also discusses using these methods to solve some strong nonlinear ODEs There are two chapters devoted to solving nonlinear ODEs using numerical methods as in practice high dimensional systems of nonlinear ODEs that cannot be solved by analytical approximate methods are common Moreover it studies analytical and numerical techniques for the treatment of parameter depending ODEs The book explains various methods for solving nonlinear oscillator and structural system problems including the energy balance method harmonic balance method amplitude frequency formulation variational iteration method homotopy perturbation method iteration perturbation method homotopy analysis method simple and multiple shooting method and the nonlinear stabilized march method This book comprehensively investigates various new analytical and numerical approximation techniques that are used in solving nonlinear oscillator and structural system problems Students often rely on the finite element method to such an extent that on graduation they have little or no knowledge of alternative methods of solving problems To rectify this the book introduces several new approximation techniques
