Distributed Operating Systems Andrzej Gościński,1991 *Distributed Operating System Design Study* Harry C. Forsdick,William I. MacGregor,Richard E. Schantz,Steven A. Swernofsky,Robert H. Thomas,BOLT BERANEK AND NEWMAN INC CAMBRIDGE MA.,1982 This report presents the results of the second phase of the Distributed Operating System Design Study The goal of this project is to advance the state of the art in several important distributed operating system DOS design areas These areas include global system control and scheduling failure detection and recovery and features desirable for hosts that must operate in a DOS Part of the effort is to characterize these design areas by identifying issues and problems related to each After the problems are identified approaches and solutions to them suitable for use in DOS designs are to be developed Topics covered include Goals for the DOS Design Basic DOS Architecture A DOS Reliability System Resource Management in Distributed Systems and A Simulation Model **Progress in Distributed Operating Systems and**

Distributed Systems Management Wolfgang Schröder-Preikschat,1990-05-22 The purpose of this workshop was to provide a general forum for distributed systems researchers Special emphasis was placed on research activities in distributed operating systems and management of distributed systems This volume includes a selection of the papers presented at the workshop They focus on the illustration of existing concepts and solutions in distributed systems research and development exemplified by case study analyses of various projects The annex contains the position papers prepared for the panel discussions at the workshop Distributed Operating Systems Andrzej Goscinski,1992 **Distributed Operating System**

Design Study Harry C. Forsdick,Bolt, Beranek, and Newman, inc,William I. MacGregor,Richard E. Schantz,Steven A. Swernofsky,Robert H. Thomas,BOLT BERANEK AND NEWMAN INC CAMBRIDGE MA.,1982 Three specific issues regarding the design of an operating system to control information processing resources distributed throughout a network of computers were investigated These issues are 1 Techniques which can be used to maintain processing continuity of the distributed system 2 The policies and mechanisms to be used for resource allocation among system processes and 3 Characteristics which constituent computers should possess to be cooperative elements with a distributed system Resource allocation policies are discussed and simulation of several resource allocation schemes were completed In addition individual techniques to provide for processing continuity are described along with a description of how these techniques could be applied to system operation Lastly recommendations for future relating to the above issues is provided **Design**
