Designing Embedded Internet Devices:

Designing Embedded Internet Devices Dan Eisenreich, Brian DeMuth, 2003 Embedded internet and internet appliances are the focus of great attention in the computing industry as they are seen as the future of computing The design of such devices presents many technical challenges This book is the first guide available that describes how to design internet access and communications capabilities into embedded systems It takes an integrated hardware software approach using the Java programming language and industry standard microcontrollers Numerous illustrations and code examples enliven the text This book shows how to build various sensors and control devices that connect to the TINI interfaces explains how to write programs that control them in Java and then ties them all together in practical applications Included is a discussion on how these technologies work where to get detailed specifications and ideas for the reader to pursue beyond the book The first guide to designing internet access and communications capabilities into embedded systems Takes an integrated hardware software approach using the Java programming language an industry standard

Designing Embedded Systems and the Internet of Things (IoT) with the ARM mbed Perry Xiao, 2018-06-15 A comprehensive and accessible introduction to the development of embedded systems and Internet of Things devices using ARM mbed Designing Embedded Systems and the Internet of Things IoT with the ARM mbed offers an accessible guide to the development of ARM mbed and includes a range of topics on the subject from the basic to the advanced ARM mbed is a platform and operating system based on 32 bit ARM Cortex M microcontrollers This important resource puts the focus on ARM mbed NXP LPC1768 and FRDM K64F evaluation boards NXP LPC1768 has powerful features such as a fast microcontroller various digital and analog I Os various serial communication interfaces and a very easy to use Web based compiler It is one of the most popular kits that are used to study and create projects FRDM K64F is relatively new and largely compatible with NXP LPC1768 but with even more powerful features This approachable text is an ideal guide that is divided into four sections Getting Started with the ARM mbed Covering the Basics Advanced Topics and Case Studies This getting started guide Offers a clear introduction to the topic Contains a wealth of original and illustrative case studies Includes a practical guide to the development of projects with the ARM mbed platform Presents timely coverage of how to develop IoT applications Designing Embedded Systems and the Internet of Things IoT with the ARM mbed offers students and R D engineers a resource for understanding the ARM mbed NXP LPC1768 evaluation board

Embedded Devices and Internet of Things Adesh Kumar, Surajit Mondal, Gaurav Verma, Prashant Mani, 2024-09-11 The text comprehensively discusses machine to machine communication in real time low power system design and estimation using field programmable gate arrays PID hardware accelerators and software integration for service applications It further covers the recent advances in embedded computing and IoT for healthcare systems The text explains the use of low power devices such as microcontrollers in executing deep neural networks and other machine learning techniques This book Discusses the embedded system software and hardware methodologies for system on

chip and FPGA Illustrates low power embedded applications AI based system design PID control design and CNN hardware design Highlights the integration of advanced 5G communication technologies with embedded systems Explains weather prediction modeling embedded machine learning and RTOS Highlights the significance of machine learning techniques on the Internet of Things IoT real time embedded system design communication and healthcare applications and provides insights on IoT applications in education fault attacks security concerns AI integration banking blockchain intelligent tutoring systems and smart technologies It is primarily written for senior undergraduates graduate students and academic researchers in the fields of electrical engineering electronics and communications engineering and computer engineering
