Desingularization Strategies For Three Dimensional Vector Fields:

Desingularization Strategies of Three-Dimensional Vector Fields Felipe Cano Torres, 2014-01-15 Lecture Notes in Mathematics, 1964 *Desingularization Strategies for Three-dimensional Vector Fields*, 1969 *Handbook of Geometry and Topology of Singularities VI: Foliations* Felipe Cano, José Luis Cisneros-Molina, Lê Dũng Tráng, José Seade, 2024-06-20 This is the sixth volume of the Handbook of Geometry and Topology of Singularities a series which aims to provide an accessible account of the state of the art of the subject its frontiers and its interactions with other areas of research Singularities are ubiquitous in mathematics and science in general and singularity theory is a crucible where different types of mathematical problems converge surprising connections are born and simple questions lead to ideas which resonate in other parts of the subject and in other subjects This Volume VI goes together with Volume V and focuses on singular holomorphic foliations which is a multidisciplinary field and a whole area of mathematics in itself Singular foliations arise for instance by considering The fibers of a smooth map between differentiable manifolds with singularities at the critical points The integral lines of a vector field or the action of a Lie group on a manifold The singularities are the orbits with special isotropy The kernel of appropriate 1 forms The singularities are the zeroes of the form Open books which naturally appear in singularity theory are foliations with singular set the binding These important examples highlight the deep connections between foliations and singularity theory This volume consists of nine chapters authored by world experts which provide in depth and reader friendly introductions to some of the foundational aspects of the theory These introductions also give insights into important lines of further research Volume VI ends with an Epilogue by one of the current world leaders in the theory of complex foliations with plenty of open questions and ideas for further research The book is addressed to graduate students and newcomers to the theory as well as to specialists who can use it as a guidebook Lecture Notes on O-Minimal Structures and Real Analytic Geometry Chris Miller, Jean-Philippe Rolin, Patrick Speissegger, 2012-09-14 This volume was produced in conjunction with the Thematic Program in o Minimal Structures and Real Analytic Geometry held from January to June of 2009 at the Fields Institute Five of the six contributions consist of notes from graduate courses associated with the program Felipe Cano on a new proof of resolution of singularities for planar analytic vector fields Chris Miller on o minimality and Hardy fields Jean Philippe Rolin on the construction of o minimal structures from quasianalytic classes Fernando Sanz on non oscillatory trajectories of vector fields and Patrick Speissegger on pfaffian sets The sixth contribution by Antongiulio Fornasiero and Tamara Servi is an adaptation to the nonstandard setting of A J Wilkie s construction of o minimal structures from infinitely differentiable functions Most of this material is either unavailable elsewhere or spread across many different sources such as research papers conference proceedings and PhD theses This book will be a useful tool for graduate students or researchers from related fields who want to learn about expansions of o minimal structures by solutions or images thereof of definable systems of differential equations Handbook of Geometry and Topology of

Singularities I José Luis Cisneros Molina, Dũng Tráng Lê, José Seade, 2020-10-24 This volume consists of ten articles which provide an in depth and reader friendly survey of some of the foundational aspects of singularity theory Authored by world experts the various contributions deal with both classical material and modern developments covering a wide range of topics which are linked to each other in fundamental ways Singularities are ubiquitous in mathematics and science in general Singularity theory interacts energetically with the rest of mathematics acting as a crucible where different types of mathematical problems interact surprising connections are born and simple questions lead to ideas which resonate in other parts of the subject This is the first volume in a series which aims to provide an accessible account of the state of the art of the subject its frontiers and its interactions with other areas of research The book is addressed to graduate students and newcomers to the theory as well as to specialists who can use it as a guidebook Monomialization of Morphisms from 3-Folds to Surfaces Steven D. Cutkosky, 2004-10-13 A morphism of algebraic varieties over a field characteristic 0 is monomial if it can locally be represented in a neighborhood by a pure monomial mappings The book gives proof that a dominant morphism from a nonsingular 3 fold X to a surface S can be monomialized by performing sequences of blowups of nonsingular subvarieties of X and S The construction is very explicit and uses techniques from resolution of singularities A research monograph in algebraic geometry it addresses researchers and graduate students Lectures on Resolution of Singularities János Kollár, 2009-01-10 Resolution of singularities is a powerful and frequently used tool in algebraic geometry In this book János Kollár provides a comprehensive treatment of the characteristic 0 case He describes more than a dozen proofs for curves many based on the original papers of Newton Riemann and Noether Kollár goes back to the original sources and presents them in a modern context He addresses three methods for surfaces and gives a self contained and entirely elementary proof of a strong and functorial resolution in all dimensions Based on a series of lectures at Princeton University and written in an informal yet lucid style this book is aimed at readers who are interested in both the historical roots of the modern methods and in a simple and transparent proof of this important theorem Resolution of Singularities Steven Dale Cutkosky, 2004 The notion of singularity is basic to mathematics In algebraic geometry the resolution of singularities by simple algebraic mappings is truly a fundamental problem It has a complete solution in characteristic zero and partial solutions in arbitrary characteristic The resolution of singularities in characteristic zero is a key result used in many subjects besides algebraic geometry such as differential equations dynamical systems number theory the theory of mathematical D modules topology and mathematical physics This book is a rigorous but instructional look at resolutions A simplified proof based on canonical resolutions is given for characteristic zero There are several proofs given for resolution of curves and surfaces in characteristic zero and arbitrary characteristic Besides explaining the tools needed for understanding resolutions Cutkosky explains the history and ideas providing valuable insight and intuition for the novice or expert There are many examples and exercises throughout the text The book is suitable for a second course on an exciting topic in algebraic geometry A core

course on resolutions is contained in Chapters 2 through 6 Additional topics are covered in the final chapters The prerequisite is a course covering the basic notions of schemes and sheaves
