Desert Water:

Desert Water William L. Fox, 2005 When we think of the desert we almost never associate it with water Rather we define it by the very absence of water Yet the desert was carved by water canyons arroyos ravines chasms washes and water in any amount is the desert s most precious and mysterious commodity Small creeks flow at night but dry up and disappear during daylight hours only to return when the sun goes down And after torrential rains entire rivers can form with small fish appearing out of what had been only a dusty streambed Small springs can support a variety of wildlife as well as pinyon juniper trees and yuccas These hydro miracles are chronicled in this new full color book by landscape photographer MARK LISK and author WILLIAM FOX In his fascinating essay Fox examines water and its role in the North American desert covering rivers trapped water pockets oases freshwater lakes salt and alkali lakes and lake beds left by ancient floods in the five major desert regions in North America the Great Basin Mojave Sonoran Colorado Plateau and Chihuahuan Five deserts four seasons and informative text and captions give the reader a deeper understanding of the western deserts of North America Plant are named with both common and scientific names Photo notes provide useful information to the striking images in the book

adsorption It then transitions to specific technologies dedicating chapters to dew harvesting fog collection and active condensation systems This progression allows readers to grasp the fundamental principles before delving into the specifics of each technology Ultimately Desert Water Harvesters analyzes the economic and environmental sustainability of these technologies considering factors like energy consumption and potential ecological impacts offering case studies and guidelines for real world implementation
