of design The new methods are described and classified in a way that makes it easier for designers and planners to find a method that suits a particular design situation They include logical procedures such as systematic search and systems engineering data gathering procedures such as literature searching and the writing of questionnaires innovative procedures such as brainstorming and synectic and system transformation and evaluative procedures such as specification writing and the selection of criteria Offering a wider view accompanied by appropriate skills than can be obtained from the teaching of any specialized design profession Design Methods is important reading for designers and teachers in numerous fields It will be welcomed by engineers architects planners and landscape architects as well as by interior graphic product and industrial designers This extraordinary book will provide key insights to software designers and numerous others outside traditional design professions who are nevertheless creatively involved in design processes It is also relevant to the teaching of cultural studies technology and any kind of creative project
