

Typical

Atypical

Supine

- Exhibits midline and symmetry of head, eyes, arms and legs
- Shows visual engagement and reaches out against gravity
- Demonstrates frequent antigravity extremity movement, dissociating from a more stable trunk

- Displays asymmetry of head and extremities, with head tilted and body curved
- Does not show a balance between extension and flexion
- Moves extremities randomly, but without expected antigravity movement
- Is not visually engaged and does not track object

Side Lying

- Uses upper arm and dissociated lower extremities to assist in facilitated roll
- Sustains sidelying posture with a balance of trunk flexor and extensor muscles
- Lifts head and upper trunk off the surface in preparation for independent rolling

- Exhibits sluggishness in top arm during facilitated roll
- Does not sustain sidelying posture; has inadequate control in position
- Cannot lift head and upper trunk off support surface

Prone

- Brings shoulders and upper arms forward with elbows in front of shoulders
- Shows progression toward lower extremity extension and abduction
- Moves arms forward to reach for an object; turns head freely to follow object
- Displays extensor activity into the lumbar spine

- Has flexed hips which shifts weight forward while keeping elbows behind shoulders
- Uses only neck extension instead of forearm weight bearing; head lifting is unsustainable
- Does not have the capability to shift weight onto lower extremities

Pull to Sit

- Maintains head-in-midline without head-lag and with good chin tuck
- Lifts legs and activates trunk muscles to assist in maneuver
- Pulls forward with both arms and abdominals to assist further in pull to sit

- Demonstrates head-lag and cannot sustain head lifting once upright
- Does not pull with arms; no upper extremity participation
- Appears not to anticipate movement toward sitting

Sitting

- Shows good head control and chin tuck, with head in midline
- Requires support only at hips and pelvis; has extension to mid-thoracic spine
- Begins to move in anterior-posterior planes and comes back from forward flexion at the hips into upright sitting

- Does not sustain head lifting; cannot turn head to look side-to-side
- Must be held high under the armpits for support
- Uses extremity posturing to compensate for decreased proximal strength

Horizontal Suspension

- Able to keep neck and trunk extended with head upright to 45 degrees, steady and in midline
- Shows trunk extension into lumbar spine and scapular adduction
- Freely moves arms and legs

- Able to hold head up briefly but cannot maintain it in midline
- Cannot sustain thoracic trunk extension and does not show hip extension
- Cannot maintain trunk extension while moving arms and legs

Protective Extension

- Displays extension through neck, trunk and hips that is maintained during forward sitting
- Cannot bring arms fully forward to surface because they are being used to sustain extension

- Unable to sustain strong neck, trunk and hip extension during forward sitting
- Uses excessive asymmetry and flexed arms to sustain extension to avoid hitting his head

Standing

- Keeps hips just behind shoulders
- Has active extension into lower thoracic and lumbar spine, but no full hip extension
- Can sustain standing posture; requires minimal support at lower trunk to aid in balance

- Requires support in the upper thoracic area to sustain standing
- Intermittent extension used to produce head lifting
- Shoulders remain well forward of hips
- Lacks adequate hip and trunk control for sustained weight bearing

Infant Development Charles W. Snow, 1998. Appropriate for undergraduate courses in Infant Development, Infant Care and Infancy Intervention. Also suitable as a supplementary text for general courses in Child Development or Child Psychology. This text covers infant development from conception through the first years of life from an interdisciplinary perspective. Following the same topical format of the first edition, today's Second Edition features comprehensive current information on each area of importance in infant development. The text's balanced coverage of theory, research and practical application, as well as the strong emphasis on the interrelationships between various developmental domains and the importance of the whole infant, have been retained and enhanced. **Developmental Psychopathology, Volume 1** Dante Cicchetti, Donald J. Cohen, 2006-03-24. Developmental Psychopathology, Second Edition, contains in three volumes the most complete and current research on every aspect of developmental psychopathology. This seminal reference work features contributions from

national and international expert researchers and clinicians who bring together an array of interdisciplinary work to ascertain how multiple levels of analysis may influence individual differences the continuity or discontinuity of patterns and the pathways by which the same developmental outcomes may be achieved This volume addresses theoretical perspectives and methodological issues including cross cultural perspectives developmental epidemiology self determination theory and gender issues *Essays on Issues in Applied Developmental Psychology and Child Psychiatry* Amer A. Hosin,2000 *Help Him Make You Smile* Rita S. Eagle,2007-03-14 Intersubjectivity refers to the motivation and capacity to connect and share one s own inner world with that of another person This book addresses the questions how does this precious human communication develop in infancy and what can or should be done when it does not develop The author presents a unique chronicle describing the day by day emergence of intersubjectivity in her infant son born with neurodevelopmental disabilities These observations are analyzed in the context of a critical review of theory and research about intersubjectivity in normal children and in children with atypical development From both sources emerges a model for how intersubjectivity develops in the parent infant interaction and guidelines for how to intervene when it does not While acknowledging the inroads that have been made in understanding this unique human capacity the author points to the questions that remain to be addressed in future research The book ends with a rare opportunity to follow the trajectory of her son s capacity for intersubjectivity over a period of more than thirty years It is addressed to theorists and researchers clinicians who work with infants and children with developmental disorders and their families and parents who want to understand their children s development *Infant Development and Risk* Anne H. Widerstrom,Barbara A. Mowder,Susan Rebecka Sandall,1997 Professors who seek a comprehensive quality introduction to working with infants at risk for developmental delays need look no further Interdisciplinary and accessible this stimulating textbook imparts the knowledge that is essential for accurate identification and appropriate early intervention Designed as an introductory text this book provides a comprehensive overview of typical and atypical development while it explains key assessment issues and intervention programs Real life case studies demonstrate state of the art intervention techniques and offer a first hand perspective on identifying babies who have or are at risk for disabilities Students in the fields of child development human services psychology and nursing will find definitions descriptions and helpful advice on risk factors screening and assessment early intervention programs and techniques collaborating with team members legal mandates IEPs and IFSPs and working with families Dealing head on with complex and sensitive subjects like eligibility criteria and ethics in the NICU this text explores some of the most vital issues in the field of early intervention A revised and updated edition it is a most valuable addition to every instructor s and students s shelf **Emotional Development in Atypical Children** Michael Lewis,Margaret Wolan Sullivan,2014-03-05 Early emotional development emotional regulation and the links between emotion and social or cognitive functioning in atypically developing children have not received much attention This lack is due in part to the priorities given to the

educational and therapeutic needs of these children Yet an understanding of the basic emotional processes in children with atypical development can only serve to promote more effective strategies for teaching and intervening in the lives of these children and their families and may contribute to our understanding of basic emotional processes as well When referring to emotions the editors mean some complex set of processes or abilities whether or not the topic is normal or atypical development Specifically they use the term emotion to refer to at least three things emotional expressions emotional states and emotional experiences The focus of this volume these three aspects of emotional life are affected by socialization practices maturational change and individual biological differences including in this case differences in children as a function of disability Contributors examine the development of emotions in children with organic or psychological disorders as well as those in compromised social contexts making this volume of prime importance to developmental clinical and social psychologists educators and child mental health experts
