Automotive Computer Controlled Systems Alan Bonnicks, 2007-08-15 *Automotive Computer Controlled Systems* explains the fundamental principles of engineering that lie behind the operation of vehicle electronic systems. Having obtained this knowledge, the reader will be able to make full use of the diagnostic equipment which is currently available. The book builds on the concepts contained in *Vehicle Electronic Systems and Fault Diagnosis* and gives clear steps to fault diagnosis and subsequent repair of the vehicle's electronic systems. The author discusses electronics only within the context of the vehicle systems under consideration and thus keeps theory to a minimum. Allan Bonnicks has written articles for several transport vehicle journals and carries out consultancy work for the Institute of Road Transport Engineers. In addition, he has had many years teaching experience and is ideally placed to write this informative guide.

Automotive Computer Network Repair Mandy Concepcion, *Automotive Computer Network Repair: Diagnostic Strategies of Modern Automotive Systems* By Mandy Concepcion. In this book, we will cover the intricacies of automotive inter-module communication systems or networks. The scope of this section will also go beyond the normal needs of an automotive technician. Hence, this will probably be the most difficult part of this series to comprehend. Be patient and open-minded. Always give yourself time to absorb the knowledge and do not be discouraged. Special emphasis will be placed on the CAN system (Controller Area Network) since it is now the standard. CAN is one of the 9 OBD 2 protocols. A protocol is an agreement on communications interchange. It is, in essence, a computer communication language and specifies signaling, wiring, size of cables used, who controls the network, and voltage levels. Various protocols were used in the past, some proprietary and some generic such as ISO 9141 and SAE 1850 VPW, but the standard is now the CAN protocol. Virtually all vehicle networks now talk to each other through the CAN protocol. It is now common place to see the seat belt SRS, Airbag, transmission, ABS, Brakes, engine, and radio modules or computer talking to each other through the network. Ever wondered why your radio volume goes up when you accelerate the vehicle? That's the engine computer or module telling the radio to raise the volume due to a higher RPM and hence higher ambient noise. It is also common to see a non-shifting transmission due to a faulty network and the issue not being related to the transmission at
