Content Distribution Networks Dinesh C. Verma,2003-04-08 Content distribution networks CDNs are the most promising new techniques for coping with the huge and swiftly growing volume of Internet traffic In essence CDNs are groups of proxy servers located at strategic points around the Internet and arranged so as to ensure that a download request can always be handled from the nearest server In this the first reference in the field a recognized CDN pioneer describes the various technologies involved and explains how they came together to form a working system With the help of case studies he covers all the practical basics and provides invaluable implementation schemes

Content Delivery Networks Rajkumar Buyya,Mukaddim Pathan,Athena Vakali,2008-07-26 Content Delivery Networks enables the readers to understand the basics to identify the underlying technology to summarize their knowledge on concepts ideas principles and various paradigms which span on broad CDNs areas Therefore aspects of CDNs in terms of basics design process practice techniques performances platforms applications and experimental results have been presented in a proper order Fundamental methods initiatives significant research results as well as references for further study have also been provided Comparison of different design and development approaches are described at the appropriate places so that new researchers as well as advanced practitioners can use the CDNs evaluation as a research roadmap All the contributions have been reviewed edited processed and placed in the appropriate order to maintain consistency so that any reader irrespective of their level of knowledge and technological skills in CDNs would get the most out of it The book is organized into three parts namely Part I CDN Fundamentals Part II CDN Modeling and Performance and Part III Advanced CDN Platforms and Applications The organization ensures the smooth flow of material as successive chapters build on prior ones

Digital Audio and Video ,2004 **The Massachusetts Register** ,2017-07-28 Implementing IP Services at the Network Edge David Ginsburg,Marie Hattar,2002 This implementation focused look at the services edge of the Internet shows how service providers can deploy high value IP services in an industry faced with increasing commoditization and competition **Proceedings of the ... International Workshop on Community Networking** ,1994 **Content-aware Caching and Traffic Management in Content Distribution Networks** Meghana Mukund Amble,2012 The rapid increase of content delivery over the Internet has lead to the proliferation of content distribution networks CDNs Management of CDNs requires algorithms for request routing content placement and eviction in such a way that user delays are small Our objective in this work is to design feasible algorithms that solve this trio of problems We abstract the system of front end source nodes and back end caches of the CDN in the likeness of the input and output nodes of a switch In this model queues of requests for different pieces of content build up at the source nodes which route these requests to a cache that contains the content For each request that is routed to a cache a corresponding data file is transmitted back to the source across links of finite capacity Caches are of finite size and the content of the caches can be refreshed periodically A requested but missing item is fetched to the cache from the media vault of the CDN In case of a lack of adequate space at the cache an existing unrequested item may be evicted from the cache in order to accommodate a new item Every such cache refresh or media vault access incurs a finite cost Hence the refresh periodicity allowed to the system represents our system cost In order to obtain small user delays our algorithms must consider the lengths of the request queues that build up at the nodes Stable policies ensure the finiteness of the request queues while good polices also lead to short queue lengths We first design a throughput optimal algorithm that solves the routing placement eviction problem using instantaneous system state information The design yields insight into the impact of different cache refresh and eviction policies on queue length We use this and construct throughput optimal algorithms that engender short queue lengths We then propose a regime of algorithms which remedies the inherent problem of wastage of capacity We also develop heuristic variants and we study their performance We illustrate the potential of our approach and validate all our claims and results through simulations on different CDN topologies **2007 International Conference on Parallel Processing** IEEE Staff,2007 Proceedings ,2006 **Journal of Zhejiang University** ,2006 Search and Retrieval Algorithms for Distributed Data Management Systems Demetrios Zeinalipour-Yazti,2005
