From Control to Drift Claudio Ciborra, Kristin Braa, 2001 Firms are investing considerable resources to create large information infrastructures able to fulfil their varied information processing and communication needs The more the drive towards globalization the more such infrastructures become crucial The wiring of the corporation should be done in a way that is aligned with its corporate strategy it is global and generates value This book presents six in depth case studies of

large corporations AstraZeneca IBM Norsk Hydro Roche SKF and Statoil which offer a rich picture of the main issues involved in information infrastructure implementation and management Far from being a linear process the use of the information infrastructure is in fact an open ended process in many cases out of control Current management models and consulting advice do not seem to be able to cope with such a business landscape This book provides the reader with interpretations and theories that can foster a different understanding and approach Thus the economics of standards complexity theory and actor network theory are harnessed to penetrate the issues emerging from the case studies and to generate a new conception of the information infrastructure that is relevant both for researchers and practitioners
