

NATURE HAS HELPED SLOW GLOBAL WARMING

Nature is our climate's secret ally. For decades, ecosystems have absorbed more than half of the carbon dioxide mankind pumped into the atmosphere due to natural sinks growing along with emissions.

Safeguarding and restoring nature leads to greater, and more secure, carbon stores.

59 BILLION TONNES

global net man-made greenhouse gas emissions in 2010

46%

man-made carbon dioxide emissions accumulated in the atmosphere, leading to global warming

54%

man-made carbon dioxide emissions taken up by nature, slowing global warming

31%

removed by land-based ecosystems

23%

taken up by ocean-based ecosystems

Climate Change 2014 - Impacts, Adaptation and Vulnerability: Global and Sectoral Aspects Christopher B. Field, Vicente R. Barros, 2014-12-29 This latest Fifth Assessment Report of the Intergovernmental Panel on Climate Change IPCC will again form the standard reference for all those concerned with climate change and its consequences including students researchers and policy makers in environmental science meteorology climatology biology ecology atmospheric chemistry and environmental policy

Hothouse Earth Stephanie Sammartino McPherson, 2021-03-02 As hurricanes droughts floods and wildfires are increasing in regularity and intensity climate change can no longer be ignored Melting permafrost forest dieback ocean acidification and other processes are creating positive feedback loops which could if not aggressively and quickly addressed spiral out of control and take global warming past the point of no return *Hothouse Earth* examines how science politics and social justice must all be part of the equation to counteract climate change

[Climate Change as a Crisis in World Civilization](#) Joseph Wayne Smith, David J. C. Shearman, Sandro Positano, 2007 This study examines the scientific evidence relating to abrupt or dangerous climate change and explores the social political legal and philosophical significance of this evidence The authors locate the climate crisis within the context of a wider crisis of civilization consisting of a series of converging threats to human survival

Our Biggest Experiment Alice Bell, 2021-09-21 Traversing science politics and technology *Our Biggest Experiment* shines a spotlight on the little known scientists who sounded the alarm to reveal the history behind the defining story of our age the climate crisis Our understanding of the Earth s fluctuating environment is an extraordinary story of human perception and scientific endeavor It also began much earlier than we might think In *Our Biggest Experiment* Alice Bell takes us back to climate change science s earliest steps in the eighteenth and nineteenth centuries through the point when concern started to rise in the 1950s and right up to today where the debate is over and the world is finally starting to face up to the reality that things are going to get a lot hotter a lot drier in some places and a lot wetter in others with catastrophic consequences for

most of Earth's biomes Our Biggest Experiment recounts how the world became addicted to fossil fuels how we discovered that electricity could be a savior and how renewable energy is far from a twentieth century discovery Bell cuts through complicated jargon and jumbles of numbers to show how we're getting to grips with what is now the defining issue of our time The message she relays is ultimately hopeful harnessing the ingenuity and intelligence that has driven the history of climate change research can result in a more sustainable and bearable future for humanity [Coming Climate Crisis?](#) Claire L. Parkinson, 2010-04-16 Decisively cutting through the hyperbole on both sides of the debate distinguished NASA climatologist Claire L Parkinson brings much needed balance and perspective to the highly contentious issue of climate change Offering a deeply knowledgeable overview of global conditions past and present the author lays out a compelling argument that our understandings and models are inadequate for confident predictions of the intended and unintended consequences of various projects now under consideration to modify future climate In one compact volume Parkinson presents a coherent synopsis of the 4.6 billion year history of climate change on planet Earth both before and after humans became a significant factor and explores current concerns regarding continued global warming and its possible consequences She ranges over the massive geoengineering schemes being proposed and why we need to be cautious about them the limitations of current global climate models and projections the key arguments made by those skeptical of the mainstream views and the realistic ways we can lessen destructive human impacts on our planet While discussing all of these polarizing topics the author consistently shows respect for the views of alarmists skeptics and the vast majority of people whose positions lie somewhere between those two extremes The book clarifies some of the most contentious points in the climate debate and in the process treats us to a fascinating discussion interweaving Earth history science the history of science and human nature Readers will be rewarded with a genuine understanding of a complex issue that could be among the most important facing humankind in the coming decades *Managing the Climate Crisis* Robert O. Schneider, 2015-12-07 Using a risk management approach to tease apart the complex issue of climate change this book assesses the key vulnerabilities and redirects the discussion to present a comprehensive plan to overhaul our response to climate change According to the 2014 U S Climate Report temperatures might increase by 5 degrees even with aggressive strategies to reduce greenhouse gas emissions and could increase by as much as 10 degrees if emissions continue unabated The report also predicts increases in extreme weather caused by global warming will continue It is time to apply the lessons of sustainable disaster mitigation and hazard resilience to respond to the challenges posed by global warming identify and assess the options we have for addressing the crisis and create a practical plan for managing the problem Unlike other books on climate change this one uniquely applies a risk management approach to answer the question Considering what our policies look like now what do we need to do next to mitigate climate change Robert O Schneider PhD explains how the warming climate will affect everything from peak temperatures and weather extremes to infrastructure such as groundwater

reservoirs airports and wastewater systems making the dire nature of the crisis clear to readers in practical and personal terms By enabling readers to understand the scientific and historical contexts of the climate crisis the author makes a compelling case for the urgency of implementing a national climate policy to respond to the challenges posed by global warming

The Climate Crisis David Archer, Stefan Rahmstorf, 2009-12-24 An incredible wealth of scientific data on global warming has been collected in the last few decades The history of the Earth s climate has been probed by drilling into polar ice sheets and sediment layers of the oceans vast depths and great advances have been made in computer modelling of our climate This book provides a concise and accessible overview of what we know about ongoing climate change and its impacts and what we can do to confront the climate crisis Using clear and simple graphics in full colour it lucidly highlights information contained in the Intergovernmental Panel on Climate Change reports and brings the subject completely up to date with current science and policy The book makes essential scientific information on this critical topic accessible to a broad audience Obtaining sound information is the first step in preventing a serious long lasting degradation of our planet s climate helping to ensure our future survival

Climate Change 2001: The Scientific Basis J. T. Houghton, Y. Ding, D. J. Griggs, M. Noguer, P. J. van der Linden, X. Dai, K. Maskell, C. A. Johnson, 2001-07-12 Climate Change 2001 The Scientific Basis is the most comprehensive and up to date scientific assessment of past present and future climate change The report Analyses an enormous body of observations of all parts of the climate system Catalogues increasing concentrations of atmospheric greenhouse gases Assesses our understanding of the processes and feedbacks which govern the climate system Projects scenarios of future climate change using a wide range of models of future emissions of greenhouse gases and aerosols Makes a detailed study of whether a human influence on climate can be identified Suggests gaps in information and understanding that remain in our knowledge of climate change and how these might be addressed This latest IPCC assessment will again form the standard scientific reference for all concerned with climate change and its consequences including students and researchers in all aspects of environmental and atmospheric science and policymakers in governments and industry worldwide

Soil Not Oil Vandana Shiva, 2008 With Soil Not Oil Vandana Shiva reveals what connects humanity s most urgent crises food insecurity peak oil and climate change and why any attempt to solve one without addressing the others will get us nowhere Condemning industrial biofuels and agriculture as recipes for ecological and economic disaster Shiva champions the small independent farm instead With millions hungry and the earth s future at peril only sustainable biologically diverse farms that are more resistant to disease drought and flood can both feed and safeguard the world for generations to come Bold and visionary Soil Not Oil calls for a return to sound agricultural principles and a world based on self organization community and environmental justice
