Industrial Biotechnological Polymers Charles Gebelein, Charles E. Carraher Jr., 1995-10-10 From the Preface This book attempts to delineate some of the more recent efforts at utilizing biotechnology in industry For convenience this book is divided into the following five sections 1 Industrial Applications 2 Polysaccharides and Lignins 3 Spider Silks 4 Protein Based Systems and 5 Miscellaneous Biotechnological Polymers The division is intended for the convenience of the reader and not to depict any basic demarcation in biotechnology which already spans much of our modern technology and appears poised to embark on a course aimed at extending its boundaries even further One of the newest trends in science is the mimicking of nature using solutions provided in nature such as elasticity to produce materials with distinctive properties The papers in this book are extensions of presentations given March 15 16 1994 in San Diego at the 207th National Meeting of the American Chemical Society during a symposium on Industrial Biotechnological Polymers This symposium was sponsored by the Biotechnology Secretariat and cosponsored by the A C S Division of Polymeric Materials Science and Engineering The editors believe this book will make a lasting contribution to the field of biotechnological polymers Surface Analysis of Paper

Terrance E. Conners, Sujit Banerjee, 2020-04-15 First published in 1995 *Surface Analysis of Paper* examines surface analysis techniques from a paper industry perspective and places heavy emphasis on applications Modern techniques including ion mass spectrometry infrared spectroscopy and optical profilometry are reviewed in a straightforward manner This new book provides details on widely used methods and instruments and discusses how they can be used to attain for example contour maps of the microscopic constituents on paper surfaces and accurate analyses of the physical properties of paper Organized into three sections *Surface Analysis of Paper* provides thorough coverage of the physical characteristics of paper and a clear picture of new and emerging analytical methods Carefully chosen background material on fundamental concepts is included wherever such material assists in understanding the uses of analysis methods Each chapter contains An introduction A description of the technique A discussion of the type of information that can be obtained with the particular technique Practical examples to demonstrate the advantages of the technique *Environmentally Benign Approaches for Pulp Bleaching* Pratima Bajpai, P. Bajpai, 2005-08-05 Pulp and paper production has increased globally and will continue to increase in the near future Approximately 155 millions tons of wood pulp is produced worldwide and about 260 millions is

projected for 2010 To cope with the increasing demand an increase in production and improved environmental performance is needed as the industry is under constant pressure to reduce environmental emissions to air and water This book gives updated information on environmentally benign approaches for pulp bleaching which can help solve the problems associated with conventional bleaching technologies Main focus is on the environmentally friendly technologies that can help solve some of the problems associated with conventional bleaching technologies Information given is up to date authoritative and cites the experiences of many mills and pertinent research which is of interest to those working in the industry or intending to do so Covers in great depth all the aspects of various bleaching processes including environmental issues AIChE Symposium Series American Institute of Chemical Engineers,1972 Pulp Bleaching Carlton W.
