Serology and Immunochemistry of Plant Viruses M.H.V. Van Regenmortel, 2012-12-02 Serology and Immunochemistry of Plant Viruses investigates the antigenic properties of plant viruses It looks at the practical aspects of plant virus serology along with the molecular basis of viral antigenicity antigenic determinants in proteins the structure of antibodies virus purification antiserum production and the theoretical principles and practical implementation of the various serological techniques It also considers the problems associated with identification and classification of plant viruses Organized into 10 chapters this volume begins with an overview of antigens and antigenic determinants before proceeding with a discussion of the immunochemistry of plant viruses virus antibody binding the role of quaternary structure in antigenicity and the structure of viral antigenic determinants The reader is also introduced to the methods and principles of purifying plant viruses preparation of antisera and purification of antibodies antigen antibody interaction immunochemical techniques used with plant viruses the role of quaternary structure on viral antigenicity diagnosis of virus diseases use of serological criteria for measuring the degree of relationship between viruses and immunochemical studies of plant viruses The book includes a bibliography with 1 400 references and a list of all the plant viruses that have been studied by serology

This book will be a useful resource for virologists and plant pathologists as well as for students and research workers in plant virology plant pathology microbiology and general virology Advances in Virus Research, 1988-08-01 Advances in Virus Research Modern Fluorescence Spectroscopy E. L. Wehry, 2012-12-06 Since the appearance of the first two volumes of Modern Fluorescence Spectroscopy in 1976 important advances continue to be made in both the techniques and applications of molecular luminescence In terms of hardware it is only recently that the application of laser excitation to molecular fluorometry has become feasible under conditions that are analytically realistic The improvements that can be effected in sensitivity analytical selectivity and ability to handle difficult samples by laser fluorometry have only begun to be exploited Likewise time resolved fluorometry has received widespread use in fundamental studies a sizable number of which deal with biological systems but has as of yet received relatively little analytical utilization The use of electronic array detectors offers the promise of obtaining luminescence spectra more rapidly and perhaps ultimately with greater sensitivity than is possible by the use of scanning instruments equipped with conventional detectors The increasing capabilities of microcomputers and the increasing sophistication of smart spectroscopic instrumentation signify that much more efficient acquisition and use can now be achieved of the information contained in the excitation emission matrix inherent in the luminescence phenomenon

whose interests or training are not primarily in immunology They clearly need the guidance that a good reference work provides Furthermore the range of immunochemical methods itself is so broad and its techniques so varied that even specialist immunologists and immunochemists find it difficult to assess different possible analytical approaches They too need the support of an extensive reference work Save 20% by subscribing to the series by 30 June 1993 *Textbook of Immunology* James T.
