Rosenthal, Michael E. Zenilman, Mark R. specialists For the editors of this book the special issues involved in the surgical care of the elderly have been apparent for nearly as long Although there have been a few scholarly texts on the subject including one in 1990 by Mark R Katlic general acceptance of the concept of geriatric surgery by our surgical and medical colleagues has however lagged This is not the result of a proportionately smaller number of older patients with surgical disease because cancer cardiovascular disease and orthopedic problems are diseases of the aged It is rather the result of uncertainty about the value of surgery in the elderly and concerns about the risks of operations In the past such concerns prevented primary care givers from referring patients for surgical care and prevented surgeons from agreeing to operate

Whalley,2001 Why do some people remain alert and vigorous at an age when others are declining mentally and physically Does their apparent advantage have a biological basis and if so could this success be transferred to others predisposed to age more quickly If this is achievable does brain aging then become the last obstacle to an extension of our useful life span These are just some of the questions answered in this book by Lawrence Whalley a researcher who specializes in the study of Alzheimer s disease He relates that the brain may be able to compensate for its own aging since the loss of brain cells with age is not as extensive as once believed and that if some surviving cells retain the capacity to replicate there may be real prospects of reducing the worst effects of brain aging In surveying the prospects of slowing or even preventing the worst effects of aging Whalley looks at the development of the brain and how this is influenced by environmental factors such as diet and stress the biological and psychological mechanisms of brain injury and disease and the range of possible treatments and preventative measures including gene therapy silicon neuron implants virtual reality and intelligent environments Throughout the book he relates the known facts about brain aging as well as our many preconceptions Reexamining older scientific studies the author is able to show that though much of what we take for granted about the mental processes of the older person is not simple we may indeed be able to alleviate the effects of mental deterioration if not now then in the future
