Control Of Partial Differential Equations:

Optimal Control of Partial Differential Equations Fredi Tröltzsch, 2024-03-21 Optimal control theory is concerned with finding control functions that minimize cost functions for systems described by differential equations The methods have found widespread applications in aeronautics mechanical engineering the life sciences and many other disciplines This book focuses on optimal control problems where the state equation is an elliptic or parabolic partial differential equation Included are topics such as the existence of optimal solutions necessary optimality conditions and adjoint equations second order sufficient conditions and main principles of selected numerical techniques It also contains a survey on the Karush Kuhn Tucker theory of nonlinear programming in Banach spaces The exposition begins with control problems with linear equations quadratic cost functions and control constraints To make the book self contained basic facts on weak solutions of elliptic and parabolic equations are introduced Principles of functional analysis are introduced and explained as they are needed Many simple examples illustrate the theory and its hidden difficulties This start to the book makes it fairly self contained and suitable for advanced undergraduates or beginning graduate students Advanced control problems for nonlinear partial differential equations are also discussed As prerequisites results on boundedness and continuity of solutions to semilinear elliptic and parabolic equations are addressed These topics are not yet readily available in books on PDEs making the exposition also interesting for researchers Alongside the main theme of the analysis of problems of optimal control Tröltzsch also discusses numerical techniques The exposition is confined to brief introductions into the basic ideas in order to give the reader an impression of how the theory can be realized numerically After reading this book the reader will be familiar with the main principles of the numerical analysis of PDE constrained optimization

Optimal Control of Partial Differential Equations Involving Pointwise State Constraints: Regularization and Applications Irwin Yousept, 2008

Optimization and Control for Partial Differential Equations Roland Herzog, Matthias Heinkenschloss, Dante Kalise, Georg Stadler, Emmanuel Trélat, 2022-03-07 This book highlights new developments in the wide and growing field of partial differential equations PDE constrained optimization Optimization problems where the dynamics evolve according to a system of PDEs arise in science engineering and economic applications and they can take the form of inverse problems optimal control problems or optimal design problems This book covers new theoretical computational as well as implementation aspects for PDE constrained optimization problems under uncertainty in shape optimization and in feedback control and it illustrates the new developments on representative problems from a variety of applications

Optimal Control Problems for Partial Differential Equations on Reticulated Domains Peter I. Kogut, Günter R. Leugering, 2011-09-09 In the development of optimal control the complexity of the systems to which it is applied has increased significantly becoming an issue in scientific computing In order to carry out model reduction on these systems the authors of this work have developed a method based on asymptotic analysis Moving from abstract explanations to examples and applications with a focus on

structural network problems they aim at combining techniques of homogenization and approximation

Optimal Control Problems for Partial Differential Equations on Reticulated Domains is an excellent reference tool for graduate students researchers and practitioners in mathematics and areas of engineering involving reticulated domains

Günter Leugering, Sebastian Engell, Andreas Griewank, Michael Hinze, Rolf Rannacher, Volker Schulz, Michael Ulbrich, Stefan Ulbrich, 2012-01-03 This special volume focuses on optimization and control of processes governed by partial differential equations The contributors are mostly participants of the DFG priority program 1253 Optimization with PDE constraints which is active since 2006 The book is organized in sections which cover almost the entire spectrum of modern research in this emerging field Indeed even though the field of optimal control and optimization for PDE constrained problems has undergone a dramatic increase of interest during the last four decades a full theory for nonlinear problems is still lacking The contributions of this volume some of which have the character of survey articles therefore aim at creating and developing further new ideas for optimization control and corresponding numerical simulations of systems of possibly coupled nonlinear partial differential equations The research conducted within this unique network of groups in more than fifteen German universities focuses on novel methods of optimization control and identification for problems in infinite dimensional spaces shape and topology problems model reduction and adaptivity discretization concepts and important applications Besides the theoretical interest the most prominent question is about the effectiveness of model based numerical optimization methods for PDEs versus a black box approach that uses existing codes often heuristic based for optimization

Optimal Control of Partial Differential Equations Andrea Manzoni, Alfio Quarteroni, Sandro Salsa, 2022-01-01 This is a book on optimal control problems OCPs for partial differential equations PDEs that evolved from a series of courses taught by the authors in the last few years at Politecnico di Milano both at the undergraduate and graduate levels The book covers the whole range spanning from the setup and the rigorous theoretical analysis of OCPs the derivation of the system of optimality conditions the proposition of suitable numerical methods their formulation their analysis including their application to a broad set of problems of practical relevance The first introductory chapter addresses a handful of representative OCPs and presents an overview of the associated mathematical issues The rest of the book is organized into three parts part I provides preliminary concepts of OCPs for algebraic and dynamical systems part II addresses OCPs involving linear PDEs mostly elliptic and parabolic type and quadratic cost functions part III deals with more general classes of OCPs that stand behind the advanced applications mentioned above Starting from simple problems that allow a hands on treatment the reader is progressively led to a general framework suitable to face a broader class of problems Moreover the inclusion of many pseudocodes allows the

reader to easily implement the algorithms illustrated throughout the text The three parts of the book are suitable to readers with variable mathematical backgrounds from advanced undergraduate to Ph D levels and beyond We believe that applied mathematicians computational scientists and engineers may find this book useful for a constructive approach toward the solution of OCPs in the context of complex applications
