**Identification of Nonlinear Systems Using Neural Networks and Polynomial Models** Andrzej Janczak, 2004-11-18 This monograph systematically presents the existing identification methods of nonlinear systems using the block oriented approach It surveys various known approaches to the identification of Wiener and Hammerstein systems which are applicable to both neural network and polynomial models The book gives a comparative study of their gradient approximation accuracy computational complexity and convergence rates and furthermore presents some new and original methods concerning the model parameter adjusting with gradient based techniques Identification of Nonlinear Systems Using Neural Networks and Polynomial Models is useful for researchers engineers and graduate students in nonlinear systems and neural network theory

**Theory of the Non-linear Analog Phase Locked Loop** Nikolaos I. Margaris, 2004-05-18 This book develops for the first time a complete and connected nonlinear theory for the analog Phase Locked Loop PLL which clarifies the obscure points of its complex non linear behaviour The book suggests new non linear models for the PLL components and applies the averaging method to analyse PLL The book presents the physical interpretation of the PLL operation locates the difficulties presented by its operation and suggests solutions to overcome these problems Finally it provides closed form expressions for all the important measures of the PLL and proposes new design criteria

**Explicit Stability Conditions for Continuous Systems** Michael I. Gil, 2005-03-17 Explicit Stability Conditions for Continuous Systems deals with non autonomous linear and nonlinear continuous finite dimensional systems Explicit conditions for the asymptotic absolute input to state and orbital stabilities are discussed This monograph provides new tools for specialists in control system theory and stability theory of ordinary differential equations with a special emphasis on the Aizerman problem A systematic exposition of the approach to stability analysis based on estimates for matrix valued functions is suggested and various classes of systems

are investigated from a unified viewpoint      *Realization Theory and Design of Digital Images* Yasumichi Hasegawa, Tatsuo Suzuki, 2006-10-20 This monograph offers a thorough examination of the description and design of digital images Regarding digital images as special input output relations in the authors previous book in the series Lecture Notes in Control and Information Sciences the description problem of digital images is transformed into the realization problem of digital images This book is intended for researchers and graduate students who specialize in image processing and system theory
