Chemical Reagents for Protein Modification Roger L. Lundblad, 1991-09 Chemical Reagents for Protein Modification 2nd Edition provides a unique combination of theoretical and practical considerations for the use of chemical reagents for site specific modification of proteins The book is divided into three sections with the first section describing general techniques including information on the organic chemistry of the various modification reactions the separation and characterization of site specific modified proteins including applications to proteins separated by electrophoresis followed by blotting the specific chemical cleavage of peptide bonds in proteins the separation of peptides by high performance liquid chromatography and electrophoresis and the use of chemical reagents to assess conformational change in proteins The second section provides an encyclopedic description of reagents and reactions for the site specific modification of individual amino acid residues in proteins The final section presents descriptions of the use of chemical reagents to label biologically significant sites in proteins including enzyme active sites and the use of covalent cross linking to measure protein protein interactions Particular emphasis is placed on the use of photoaffinity reagents The book will be an extremely useful research tool for all investigators interested in the solution chemistry of proteins

**Chemical Reagents for Protein Modification** Roger L. Lundblad, 2018-01-18 The contents of this book are focused on the use of chemical modification to study the properties of proteins in solution Particular emphasis has been placed on the practical laboratory aspects of this approach to the study of the relationship between structure and function in the complex class of biological heteropolymers

**Chemical Reagents for Protein Modification, Fourth Edition** Roger L. Lundblad, 2014-07-22 The use of the chemical modification of proteins has evolved over the past 80 years benefiting from advances in analytical physical and organic chemistry Over the past 30 years the use of chemical reagents to modify proteins has been crucial in determining the function and structure of purified proteins This groundbreaking work is part of the foundation of emerging disciplines of proteomics chemical biology structure biology and chemical proteomics Chemical Reagents for Protein Modification Fourth Edition provides a comprehensive review of reagents used for the chemical modification of proteins representing a major revision of the work presented in previous editions The completely updated Fourth Edition is substantially larger and includes five new chapters Alkylating Agents Acylating Agents Nitration and Nitrosylation Oxidation Modification of Proteins with Reducing Agents There is greatly increased coverage of the chemical modification of cysteine which is critical for bioconjugate synthesis The chapter on reduction also provides information necessary for bioconjugate synthesis as well as for the processing of inclusion bodies The book places emphasis on conditions that affect the specificity of the chemical modification of proteins such as solvent and temperature The format has been markedly revised presenting information based on the chemical nature of the modifying material and on the amino acid residue modified This new version has increased significance to biopharmaceuticals Much of the information is in tabular form which enables the rapid location of cited material
