Modeling Jahan B. Ghasemi, 2022-10-20 *Machine Learning and Pattern Recognition Methods in Chemistry from Multivariate and Data Driven Modeling* outlines key knowledge in this area combining critical introductory approaches with the latest advanced techniques Beginning with an introduction of univariate and multivariate statistical analysis the book then explores multivariate calibration and validation methods Soft modeling in chemical data analysis hyperspectral data analysis and autoencoder applications in analytical chemistry are then discussed providing useful examples of the techniques in chemistry applications Drawing on the knowledge of a global team of researchers this book will be a helpful guide for chemists interested in developing their skills in multivariate data and error analysis Provides an introductory overview of statistical methods for the analysis and interpretation of chemical data Discusses the use of machine learning for recognizing patterns in multidimensional chemical data Identifies common sources of multivariate errors *An Investigation of Chemical Pattern*

Brereton, 2009-09-28 Over the past decade pattern recognition has been one of the fastest growth points in chemometrics

This has been catalysed by the increase in capabilities of automated instruments such as LCMS GCMS and NMR to name a few to obtain large quantities of data and in parallel the significant growth in applications especially in biomedical analytical chemical measurements of extracts from humans and animals together with the increased capabilities of desktop computing

The interpretation of such multivariate datasets has required the application and development of new chemometric

techniques such as pattern recognition the focus of this work Included within the text are Real world pattern recognition

case studies from a wide variety of sources including biology medicine materials pharmaceuticals food forensics and

environmental science Discussions of methods many of which are also common in biology biological analytical chemistry and machine learning Common tools such as Partial Least Squares and Principal Components Analysis as well as those that are

rarely used in chemometrics such as Self Organising Maps and Support Vector Machines Representation in full colour

Validation of models and hypothesis testing and the underlying motivation of the methods including how to avoid some

common pitfalls Relevant to active chemometricians and analytical scientists in industry academia and government

establishments as well as those involved in applying statistics and computational pattern recognition

Multivariate Pattern Recognition in Chemometrics Richard G. Brereton, 1992-01-01 Chemometrics originated from multivariate statistics in chemistry and this field is still the core of the subject The increasing availability of user friendly software in the laboratory has prompted the need to optimize it safely This work comprises material presented in courses organized from 1987 1992 aimed mainly at professionals in industry The book covers approaches for pattern recognition as applied primarily to multivariate chemical data These include data reduction and display techniques principal components analysis and methods for classification and clustering Comprehensive case studies illustrate the book including numerical examples and extensive problems are interspersed throughout the text The book contains extensive cross referencing between various chapters comparing different notations and approaches enabling readers from different backgrounds to benefit from it and to move around chapters at will Worked examples and exercises are given making the volume valuable for courses Tutorial versions of SPECTRAMAP and SIRIUS are optionally available as a Software Supplement at a low price to accompany the text
