Agent Only:

Agent Only R. Goldberg, 2005-02 *Agent Only* tells the riveting story of two law partners torn apart by a bitter hatred for each other but linked by their ambitions and love for one woman Author Robert Goldberg delivers an absorbing tale of murder and deception within a vivid Chicago setting In this gripping narrative the slaying of Frank Reinhart a prominent trial lawyer in Chicago triggers a police investigation and then an indictment In the ensuing murder trial the victim's life is laid bare revealing far more than his law partners might ever have imagined And yet despite an able prosecutor as beautiful as she is brilliant and a wily defense attorney there are more questions than answers Did Reinhart's resentful law partner William Freund murder him Did his jealous wife Adelle Reinhart romantically linked to Freund commit the crime Or did one of Reinhart's unsavory business partners pull the trigger With each new revelation the key clue is sought while the crusty senior trial judge is more intent on moving his caseload than on rendering justice

Life Cycle for Clusters? Kerstin Press,2006-09-05 rium states but on the development process following an external shock Kerstin Press adopts a new methodological approach She develops a theoretic model of clusters change and adaptation that is based on the N K model of complex s tems Kauffman 1993 Taking the existing insight on the dynamics of N K s tems propositions on the influence of cluster architecture on adaptability are rived In a second step these propositions are tested by simulations comparing the adaptability of clusters with given differences in their architecture regarding the degree of division of labour on the one and the governance structure on the other hand Both aspects division of labour governance were found to matter for cl ter adaptability in previous empirical studies but general causalities for their role in cluster adjustment could not be derived from individual case studies Within the all else held equal perspective adopted in the simulation model one explanation for how and when division of labour and governance matter for cluster adjustment is found While the model faces several limitations these are more to be seen as possible areas for future research The present study opens up new avenues in cluster research Rather than just focussing on emergence or existence clusters are viewed as entities underlying a dynamic development The analysis of their adaptability to external changes c stitutes a first important step towards a non deterministic perspective on cluster development
