Autolexical Syntax A Theory Of Parallel Grammatical Representations:

Autolexical Syntax Jerrold M. Sadock, 1991 In *Autolexical Syntax* Jerrold M. Sadock argues for a radical departure from the derivational model of grammar that has prevailed in linguistics for thirty years. He offers an alternative theory in which the various components of grammar in particular syntax, semantics, and morphology are viewed as fully autonomous descriptive devices for various parallel dimensions of linguistic representation. The lexicon in this theory forges the connection between autonomous representations in that a typical lexeme plays a role in all three of the major components of the grammar. Sadock's principal innovation is the postulation of a uniform set of interface conditions that require the several orthogonal representations of a single natural language expression to match up in certain ways. Through a detailed application of his theory to the twin morphosyntactic problems of cliticization and incorporation, Sadock shows that very straightforward accounts are made possible by the nonderivational model. He demonstrates the empirical success of these accounts by examining more than two dozen morphosyntactic problems in almost as many languages. *Autolexical Syntax* will be of interest to those in the fields of theoretical grammar, particularly concerned with the problems of morphology and syntax, as well as philosophers of language, logicians, lexicographers, psychologists of language, and computer scientists.

Autolexical Jerrold M. Sadock, 1991 **Pragmatics and Autolexical Grammar** Etsuyo Yuasa, Tista Bagchi, Katharine P. Beals, 2011 This book presents papers in honor of Jerry Sadock's rich legacy in pragmatics and Autolexical Grammar. Highlights of the pragmatics section include Larry Horn on almost-barely and assertoric inertia, William Lycan on Sadock's resolution of the Performadox with truth₁ and truth₂, and Jay Atlas on Moore's Paradox and the truth value of propositions of belief. Highlights of the Autolexical Grammar section include Fritz Newmeyer's comparison of the minimalist autolexical and transformational treatments of English nominals, Barbara Abbott's extension of Sadock's PRO-less syntax to a PRO-less semantics of the infinitival complements of know-how, and Haj Ross's syntactic connections between semantically related English pseudoclefts. Encompassing a range of languages (Aleut, Bangla, Greenlandic, Japanese, and a home-based sign language) and extending into psycholinguistics, language acquisition, sentence processing, and autism, this volume will interest a range of readers from theoretical linguists and philosophers of language to applied linguists and exotic language specialists.

The series publishes state-of-the-art work on core areas of linguistics across theoretical frameworks as well as studies that provide new insights by building bridges to neighbouring fields such as neuroscience and cognitive science. *TRENDS IN LINGUISTICS* considers itself a forum for cutting-edge research based on solid empirical data on language in its various manifestations, including sign languages. It regards linguistic variation in its synchronic and diachronic dimensions as well as in its social contexts as important sources of insight for a better understanding of the design of linguistic systems and the ecology and evolution of language. *TRENDS IN*

Current Approaches to Syntax András Kertész, Edith Moravcsik, Csilla Rákosi, 2019-05-06 Even though the range of phenomena syntactic theories intend to account for is basically the same the large number of current approaches to syntax shows how differently these phenomena can be interpreted described and explained The goal of the volume is to probe into the question of how exactly these frameworks differ and what if anything they have in common Descriptions of a sample of current approaches to syntax are presented by their major practitioners Part I followed by their metatheoretical underpinnings Part II Given that the goal is to facilitate a systematic comparison among the approaches a checklist of issues was given to the contributors to address The main headings are Data Goals Descriptive Tools and Criteria for Evaluation The chapters are structured uniformly allowing an item by item survey across the frameworks The introduction lays out the parameters along which syntactic frameworks must be the same and how they may differ and a final paper draws some conclusions about similarities and differences The volume is of interest to descriptive linguists theoreticians of grammar philosophers of science and studies of the cognitive science of science
